

# Challenges for the Design and Implementation of Programs Ensuring Early Childhood Comprehensive Attention

*Ricardo Paes de Barros (INSPER/IAS)*  
*Rosane Mendonça (UFF)*

# ***Presentation Plan***

- 1. The importance and the components of early childhood comprehensive attention is known**
- 2. Defining the roles of family and government in the provision of comprehensive care.**
- 3. Brazilian Progress and the need for continuity**
- 4. Monitoring child development**
- 5. What is needed I? Focus on positive rights**
- 6. What is needed II? Integration of public programs and between public and private actions**
- 7. What do we need to know? Sequencing**

# ***Presentation Plan***

- 1. The importance and the components of early childhood comprehensive attention is known**
2. Defining the roles of family and government in the provision of comprehensive care.
3. Brazilian Progress and the need for continuity
4. Monitoring child development
5. What is needed I? Focus on positive rights
6. What is needed II? Integration of public programs and between public and private actions
7. What do we need to know? Sequencing

# ***Presentation Plan***

1. The importance and the components of early childhood comprehensive attention is known
2. **Defining the roles of family and government in the provision of comprehensive care.**
3. Brazilian Progress and the need for continuity
4. Monitoring child development
5. What is needed I? Focus on positive rights
6. What is needed II? Integration of public programs and between public and private actions
7. What do we need to know? Sequencing

## ***Roles of Family and Government***

- **Confusion between comprehensive attention and care through public programs.**
- **Complementarity or substitution between family actions and governmental programs.**
- **Fulltime versus part-time daycare centers.**
- **Home visits for all versus home visits just for the most vulnerable groups.**

# ***Presentation Plan***

1. The importance and the components of early childhood comprehensive attention is known
2. Defining the roles of family and government in the provision of comprehensive care.
3. **Brazilian Progress and the need for continuity**
4. Monitoring child 'development
5. What is needed I? Focus on positive rights
6. What is needed II? Integration of public programs and between public and private actions
7. What do we need to know? Sequencing

## Evolution of Infant Mortality Rate: 1990-2011

# Child mortality (up to 5 years old) rate in Brazilian Municipalities: 1991

Source: HDI-M Atlas

# Child mortality (up to 5 years old) rate in Brazilian Municipalities: 2010

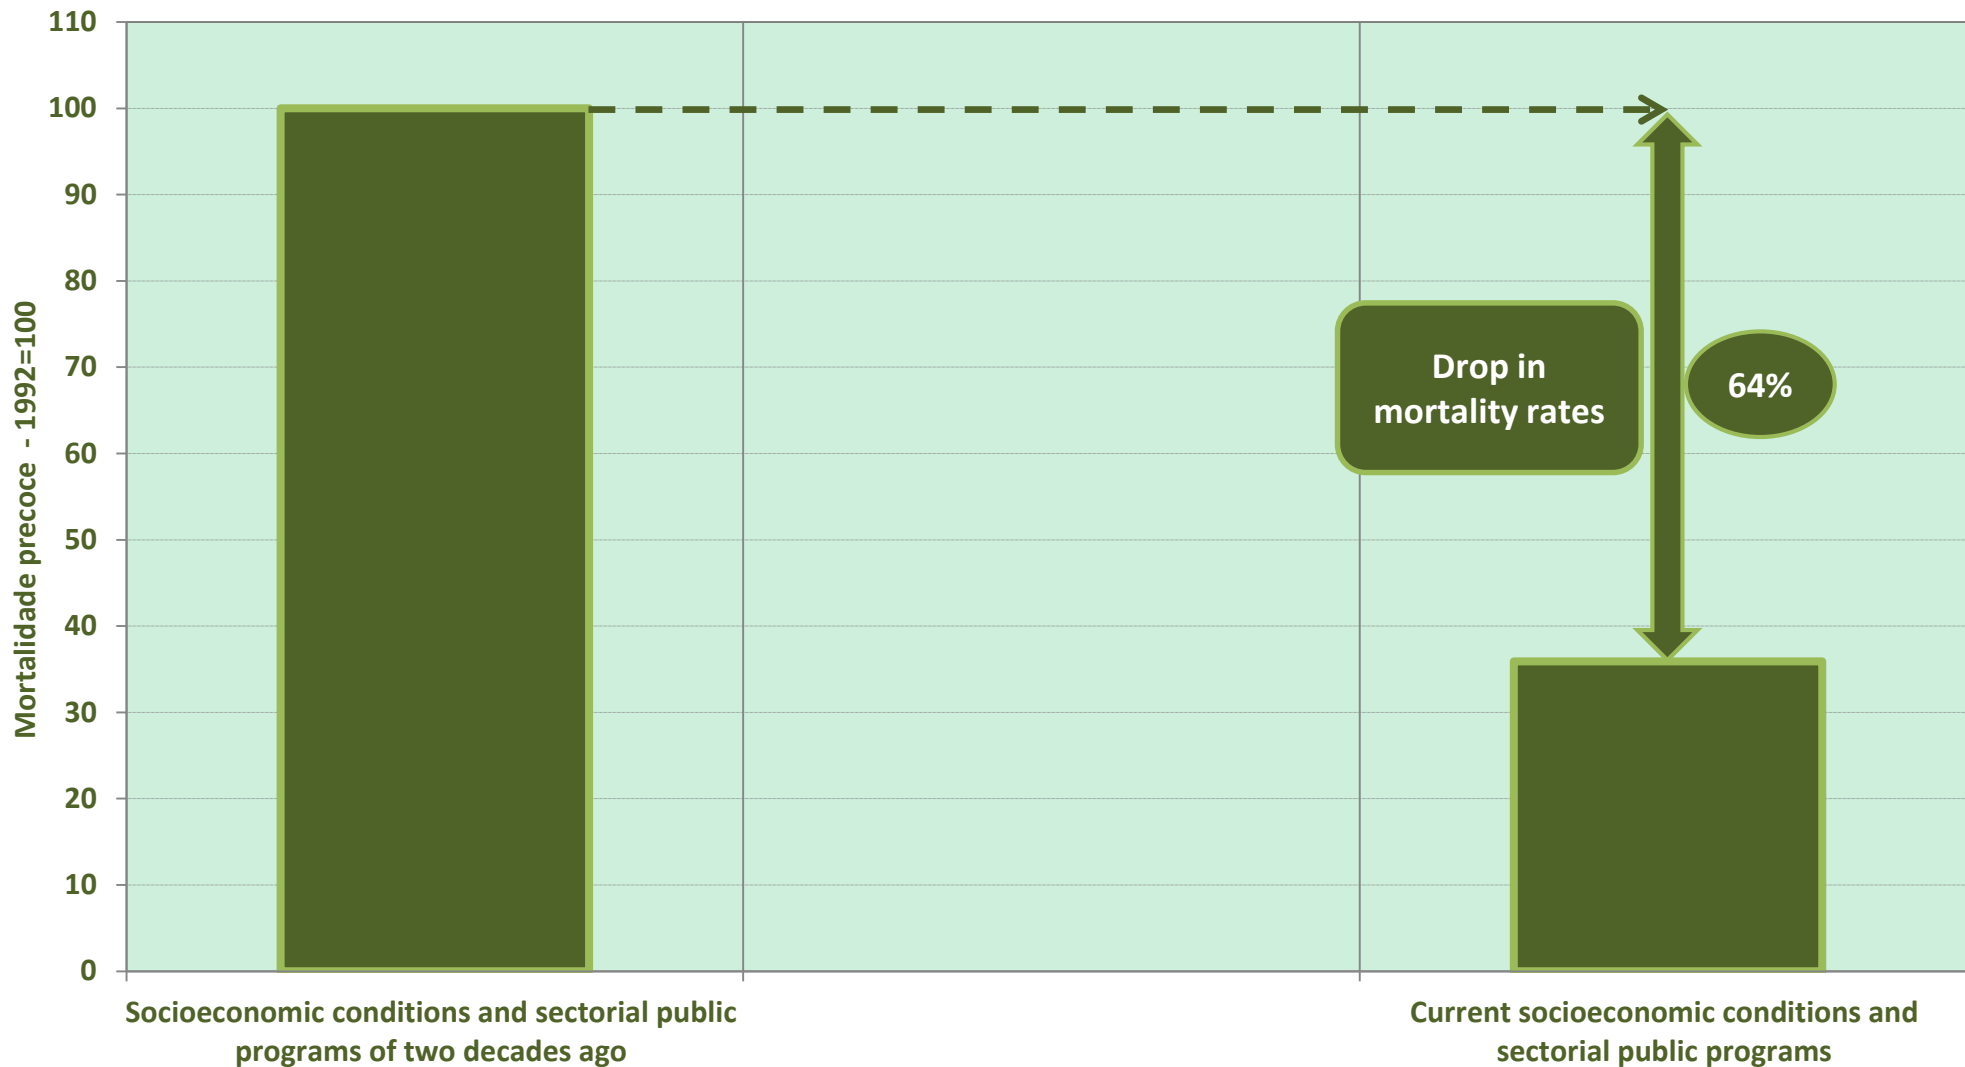

Source: HDI-M Atlas

## Evolution of the Access to Daycare Centers: 1990-2011

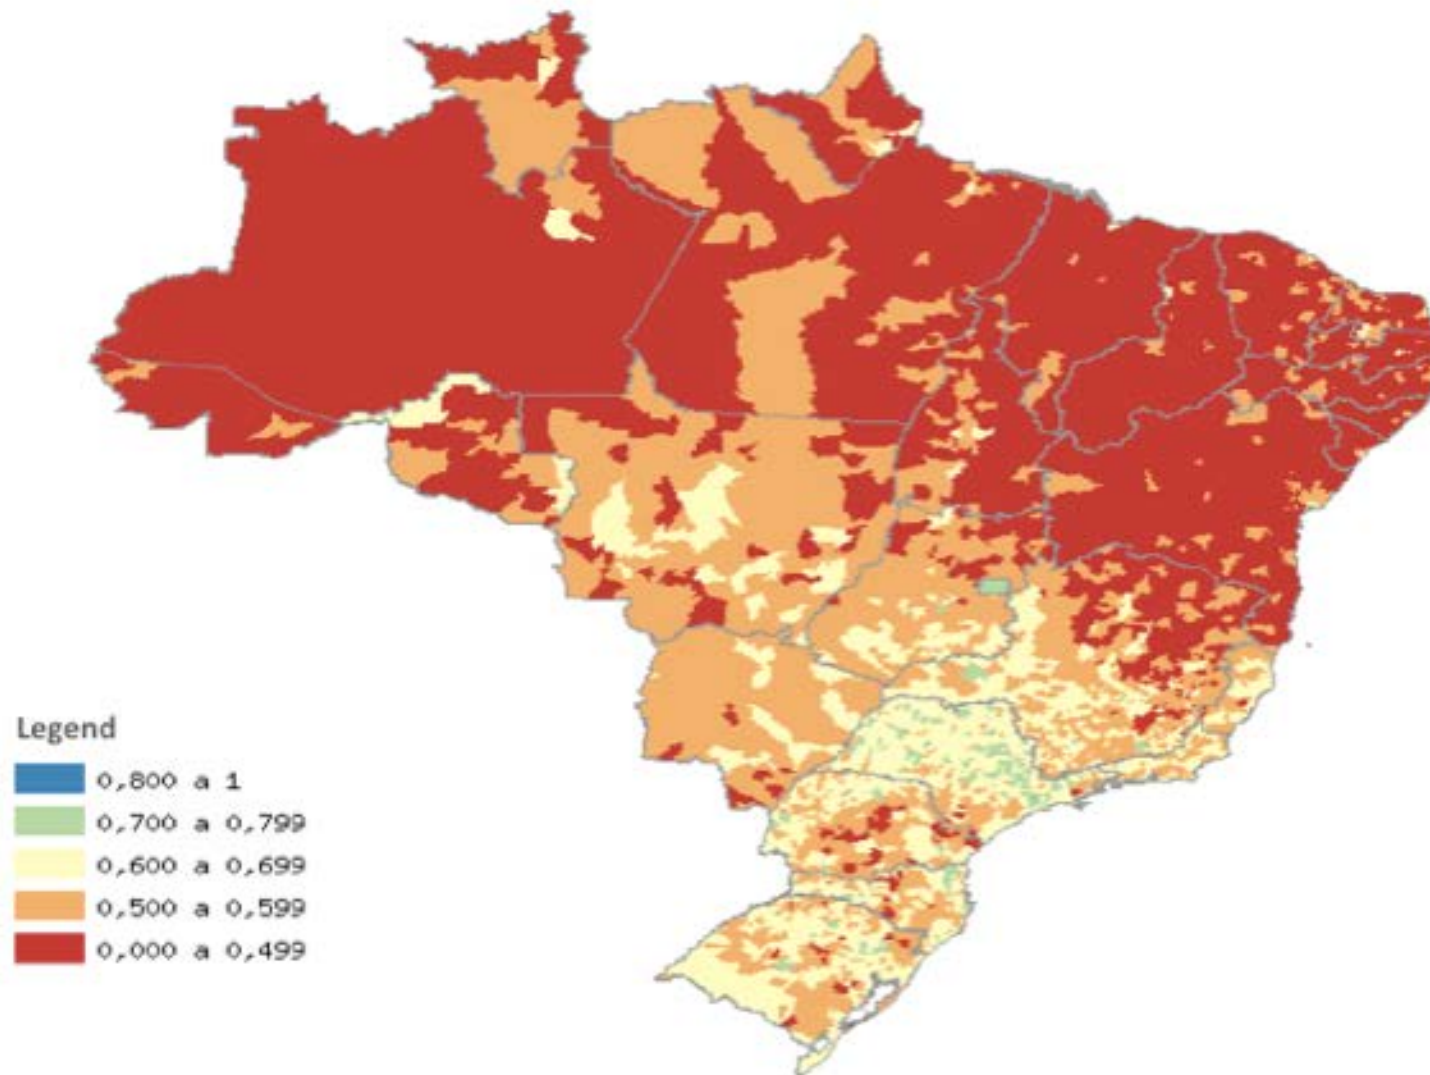

# Evaluating the contribution of improvements in socioeconomic status of families

## Decomposition of the drop in child mortality between sectoral social programs and socio-economic status

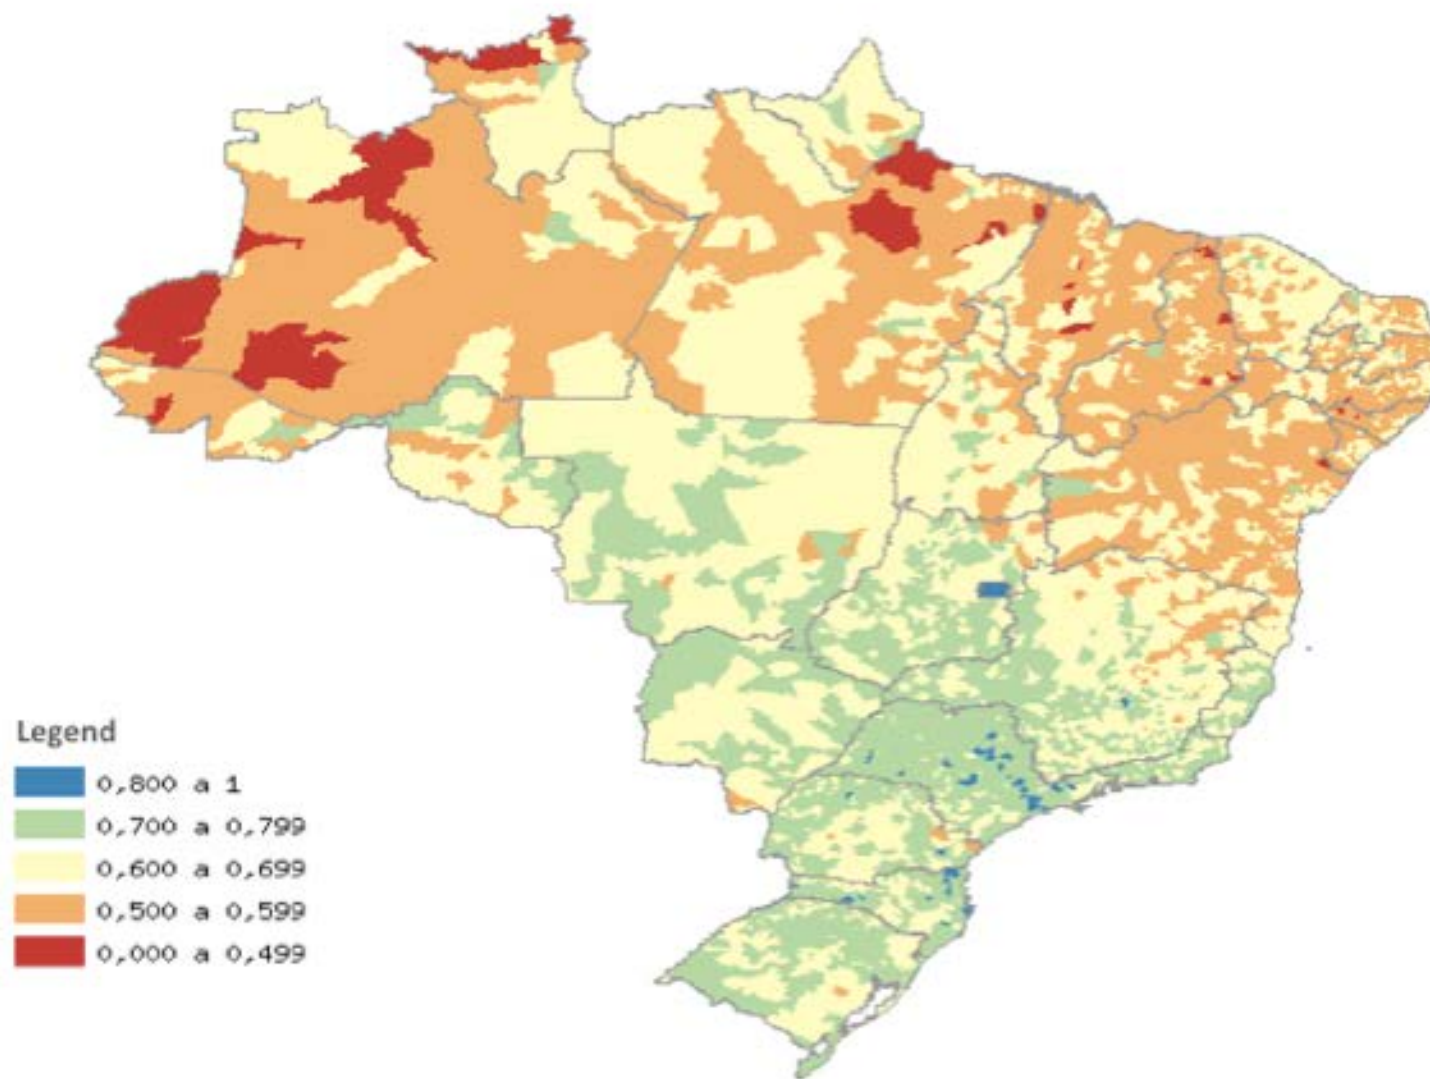

## Brazilian progress: HDI by municipality Brazil: 2000

Source: SAE/PR, based on Demographic Census of 2000 and 2010 and HDI as calculated by the UNDP, Human Development Report.

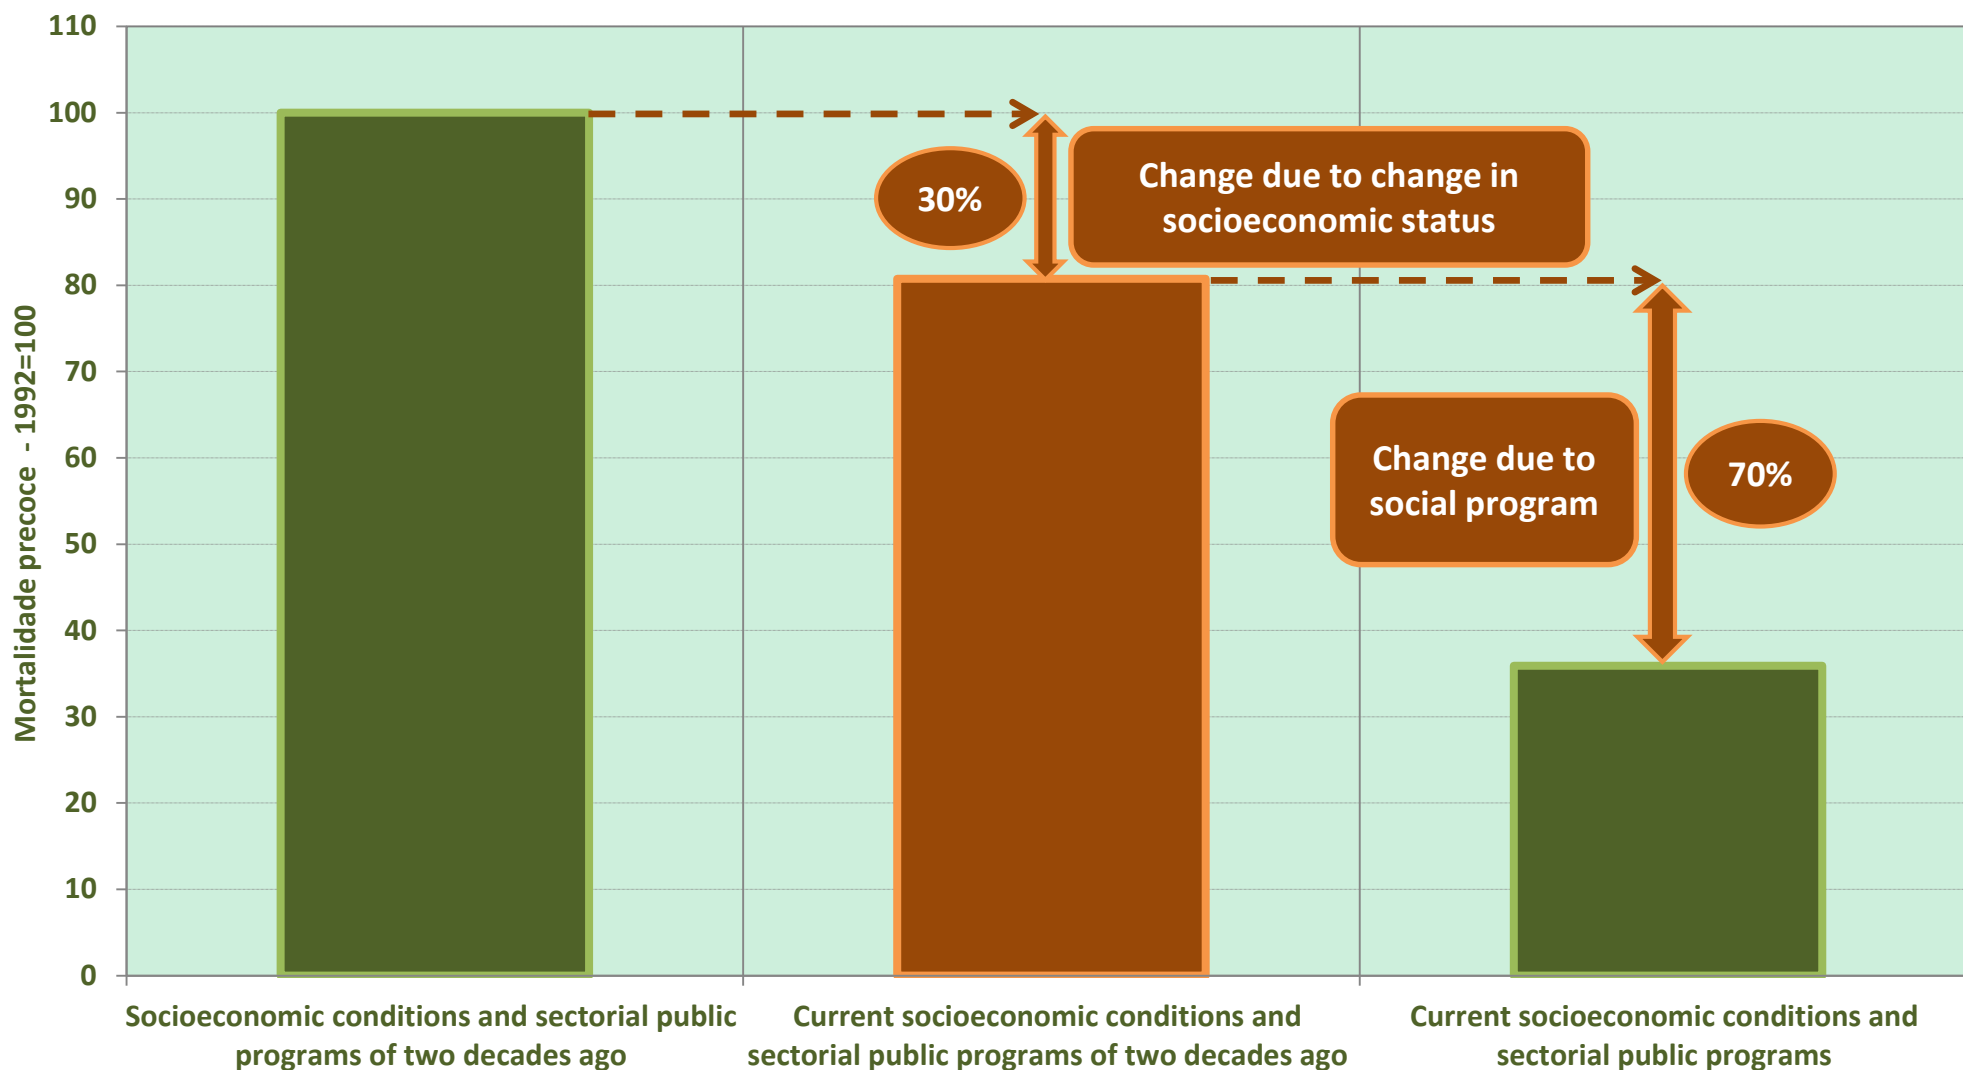

## Brazilian progress: HDI by municipality Brazil: 2010

Source: SAE/PR, based on Demographic Census of 2000 and 2010 and HDI as calculated by the UNDP, Human Development Report.

Although socioeconomic progress has been of great help, the vast majority of the improvement in child development was due to sectorial public programs

## Decomposition of the drop in child mortality between sectorial social programs and socio-economic status

# Supply of basic care services for early childhood

## *Health:*

- ✓ 50 thousand family health care teams – ESF,
- ✓ 66% of population covered,
- ✓ 265 thousand community health agents – PACS and
- ✓ 24 thousand dental care teams - ESD.

## *Social Assistance:*

- ✓ 8 thousand one-stop-shops for social protection –CRAS,
- ✓ 91% with Program of integrated family care – PAIF,
- ✓ 98% of the Brazilian municipalities with at least one one-stop-shop for social protection.

## *Education:*

- ✓ 2,5 million children attending 50 thousand childcare centers.
- ✓ More of 25% of the 0-3 population covered.

# Innovative Local Early Childhood Programs

# Legislation and Institutional Advances

- ✓ **Child and Adolescent Rights Statute – ECA**
- ✓ **“Marco Legal” (Legal References) for Early Childhood Development**
- ✓ **Subscribing the UN document “A World Fit for Children”**
- ✓ **Strengthening and expansion of the number of Child Guardianship Councils (Conselhos Tutelares) – present in 98% of municipalities**
- ✓ **Strengthening of the State and Municipal Councils for the Protection of the Rights of Children – present in 92% of municipalities.**
- ✓ **Strengthening of Childhood and Adolescence Development Funds (FIA).**

# Probability of survival, children born last year: Brazil, 1993 e 2013

*A Guide to General Comment 7:*  
***‘Implementing Child Rights  
in Early Childhood’***

**United Nations Committee on the Rights of the Child  
United Nations Children’s Fund  
and Bernard van Leer Foundation**

*Data collection*

6. The Committee reiterates the importance of comprehensive and up-to-date quantitative and qualitative data on all aspects of early childhood for the formulation, monitoring and evaluation of progress achieved and impact assessment of policies. In view of the lack, in many States parties, of adequate national data collection systems on early childhood for all areas covered by the Convention and that specific and disaggregated information on children in early years are not readily available, the Committee urges all States parties to develop a system of data collection and indicators consistent with the Convention and disaggregated by gender, age, family structure, and urban and rural residence, and other relevant categories. This system should cover all children up to the age of 18 years, with specific emphasis on early childhood, particularly children belonging to vulnerable groups.

# Monitoring is Necessary

Canada is a signatory to the United Nations Convention on the Rights of the Child, which commits us to ensuring that all children are provided with the opportunities they need to develop cognitively, physically, socio-emotionally and spiritually.

The ability to comply with this commitment requires a system that monitors early childhood outcomes.

How else can we guarantee that all children and their families have the support and resources they need to thrive?

---

## Canadian Early Years TaskForce

**Members:** *Robin Williams MD (Chair until June 30, 2011); Sue Bennett MD; Jean Clinton MD; Clyde Hertzman MD; Denis Leduc MD; Andrew Lynk MD*

**Principal authors:** *Clyde Hertzman MD; Jean Clinton MD; Andrew Lynk MD*

**“In this statement, the  
Canadian Pediatric Society  
calls on federal and provincial/territorial  
governments to measure and monitor  
the developmental progress of  
children in Canada”**

510 milestones

# *Presentation Plan*

1. The importance and the components of early childhood comprehensive attention is known
2. Defining the roles of family and government in the provision of comprehensive care.
3. Brazilian Progress and the need for continuity
4. Monitoring child development
5. **What is needed I? Focus on positive rights**
6. What is needed II? Integration of public programs and between public and private actions
7. What do we need to know? Sequencing

## *From an approach based on negative rights to an approach based on positive rights*

### *Traditional approach:*

- ✓ *Based on guaranteeing basic negative rights.*
- ✓ *For instance, guaranteeing the child will not: (i) die, (ii) get sick or (iii) be hungry*
- ✓ *Hence, the focus of reducing (i) mortality rates, (ii) morbidity rates and (iii) malnutrition rates*
- ✓ *Emphasis on actions aimed at (i) defense of rights, (ii) protection, (iii) prevention of violation of rights*
- ✓ *Hence the concentration on avoiding (i) negligence and disregard, (ii) violence, e (iii) abuse e cruelty*

## *From an approach based on negative rights to an approach based on positive rights*

### *Focus on positive rights:*

#### *Directed to*

- (i) Complete development of the potential of every child and for*
- (ii) The promotion of his well-being during childhood.*

#### *Focus on:*

- (i) Opportunities to play,*
- (ii) Development of motor skills,*
- (iii) Capacity to communicate,*
- (iv) Cognitive potential ,*
- (v) Opportunities to develop progressive autonomy,*
- (vi) Development of social and emotional skills*

## ***From an approach based on negative rights to an approach based on positive rights***

***Focus on positive rights:***

***Emphasis on child development***

***Require actions of four types:***

- (i) Opportunities necessary for each child to develop his full potential;***
- (ii) Condition for each child be able to fully benefit from the available opportunities;***
- (iii) Information and advise for parents to ensure their children have and effective access to the available opportunities;***
- (iv) Stimulation, interaction and incentives to ensure children fully benefit from the available opportunities***

# ***Presentation Plan***

1. The importance and the components of early childhood comprehensive attention is known
2. Defining the roles of family and government in the provision of comprehensive care.
3. Brazilian Progress and the need for continuity
4. Monitoring child development
5. What is needed I? Focus on positive rights
6. **What is needed II? Integration of public programs and between public and private actions**
7. What do we need to know? Sequencing

# Components of an Integrated Program Offering Comprehensive Care for Early Childhood Development

- *Unification or consolidation of:*
  - ✓ *Program's name*
  - ✓ *Local governance*
  - ✓ *Calendar of activities*
  - ✓ *Center for accessing all benefits and services*
  - ✓ *Personal records*
  - ✓ *Offer of services*
  - ✓ *System to evaluate children's development*
- ✓ *Customization*
  - ✓ *Individual development plan*
  - ✓ *Individual servicing plan (at home and at local center)*

## Objectives of an Integrated Program Offering Comprehensive Care for Early Childhood Development

- *To promote the complete development of the potential of each child;*
- *To ensure all parents can give to their children the best available attention, care and opportunities;*
- *To take advantage of all synergies among all sectorial actions and services available in the community;*
- *To promote intense community participation in providing comprehensive care for early childhood development.*

# ***Presentation Plan***

1. The importance and the components of early childhood comprehensive attention is known
2. Defining the roles of family and government in the provision of comprehensive care.
3. Brazilian Progress and the need for continuity
4. Monitoring child development
5. What is needed I? Focus on positive rights
6. What is needed II? Integration of public programs and between public and private actions
7. **What do we need to know? Sequencing**

# **Phases in the Construction of a System to Provide Comprehensive Care to Early Childhood Development**

- 1. Expansion of coverage of programs devoted to early childhood development**
- 2. Improvements on the quality of public and private services**
- 3. Integration of available supply of services and programs aimed at early childhood development**

# The Impact of the Availability and Quality of Daycare Centers on Child Development

*Ricardo Barros – Insper-IAS*

*Mirela de Carvalho – Instituto Unibanco*

*Samuel Franco – Instituto Unibanco*

*Rosane Mendonça – UFF*

*Pedro Olinto – World Bank*

*Andreza Rosalém – IJSN*

# **A. On the Impact of the Quality of Services**

---

## Impact of an extra year of daycare and pre-school on educational performance, labor force participation and income

| Outcome  | Daycare      |            | Pre-school   |            |
|--|--------------|------------|--------------|------------|
|  | Coefficient  | P-value(%) | Coefficient  | P-value(%) |
| <b><i>The impact on educational performance</i></b>  |              |            |              |            |
| Finally achieved educational level   | <b>-0.07</b> | <b>33</b>  | <b>0.63</b>  | <b>8</b>   |
| Probability of completing 8th grade  | <b>-0.14</b> | <b>63</b>  | <b>0.27</b>  | <b>0</b>   |
| Probability of completing secondary education  | <b>-0.05</b> | <b>85</b>  | <b>0.18</b>  | <b>1</b>   |
| Probability of going to college  | <b>-0.06</b> | <b>91</b>  | <b>0.35</b>  | <b>0</b>   |
| Probability of having completed 4 <sup>th</sup> grade before age 14                                    | <b>-9.47</b> | <b>34</b>  | <b>0.65</b>  | <b>2</b>   |
| Probability of having completed 8 <sup>th</sup> grade before age 18                                    | <b>7.65</b>  | <b>97</b>  | <b>0.41</b>  | <b>23</b>  |
| Probability of having completing secondary educational before age 25                                   | <b>0.65</b>  | <b>6</b>   | <b>0.05</b>  | <b>9</b>   |
| Probability of entering college before age 25  | <b>0.67</b>  | <b>18</b>  | <b>0.50</b>  | <b>2</b>   |
| Repetition rate (ratio between the number of years spent on school and the number of grades completed) | <b>-0.01</b> | <b>80</b>  | <b>-0.05</b> | <b>0</b>   |
| <b><i>The impact on labor market outcomes</i></b>  |              |            |              |            |
| Labor force participation rate (women 25 to 64 years old)  | <b>0.67</b>  | <b>54</b>  | <b>-0.10</b> | <b>16</b>  |
| Occupation rate (women 25 to 64 years old)   | <b>0.78</b>  | <b>53</b>  | <b>-0.07</b> | <b>27</b>  |
| Labor income (men 25 to 64 years old)  | <b>-0.06</b> | <b>61</b>  | <b>0.06</b>  | <b>7</b>   |

Note: This study was used as a background paper for: Young, Mary Eming. From Early Child Development to Human Development: Investing in Our Children's Future

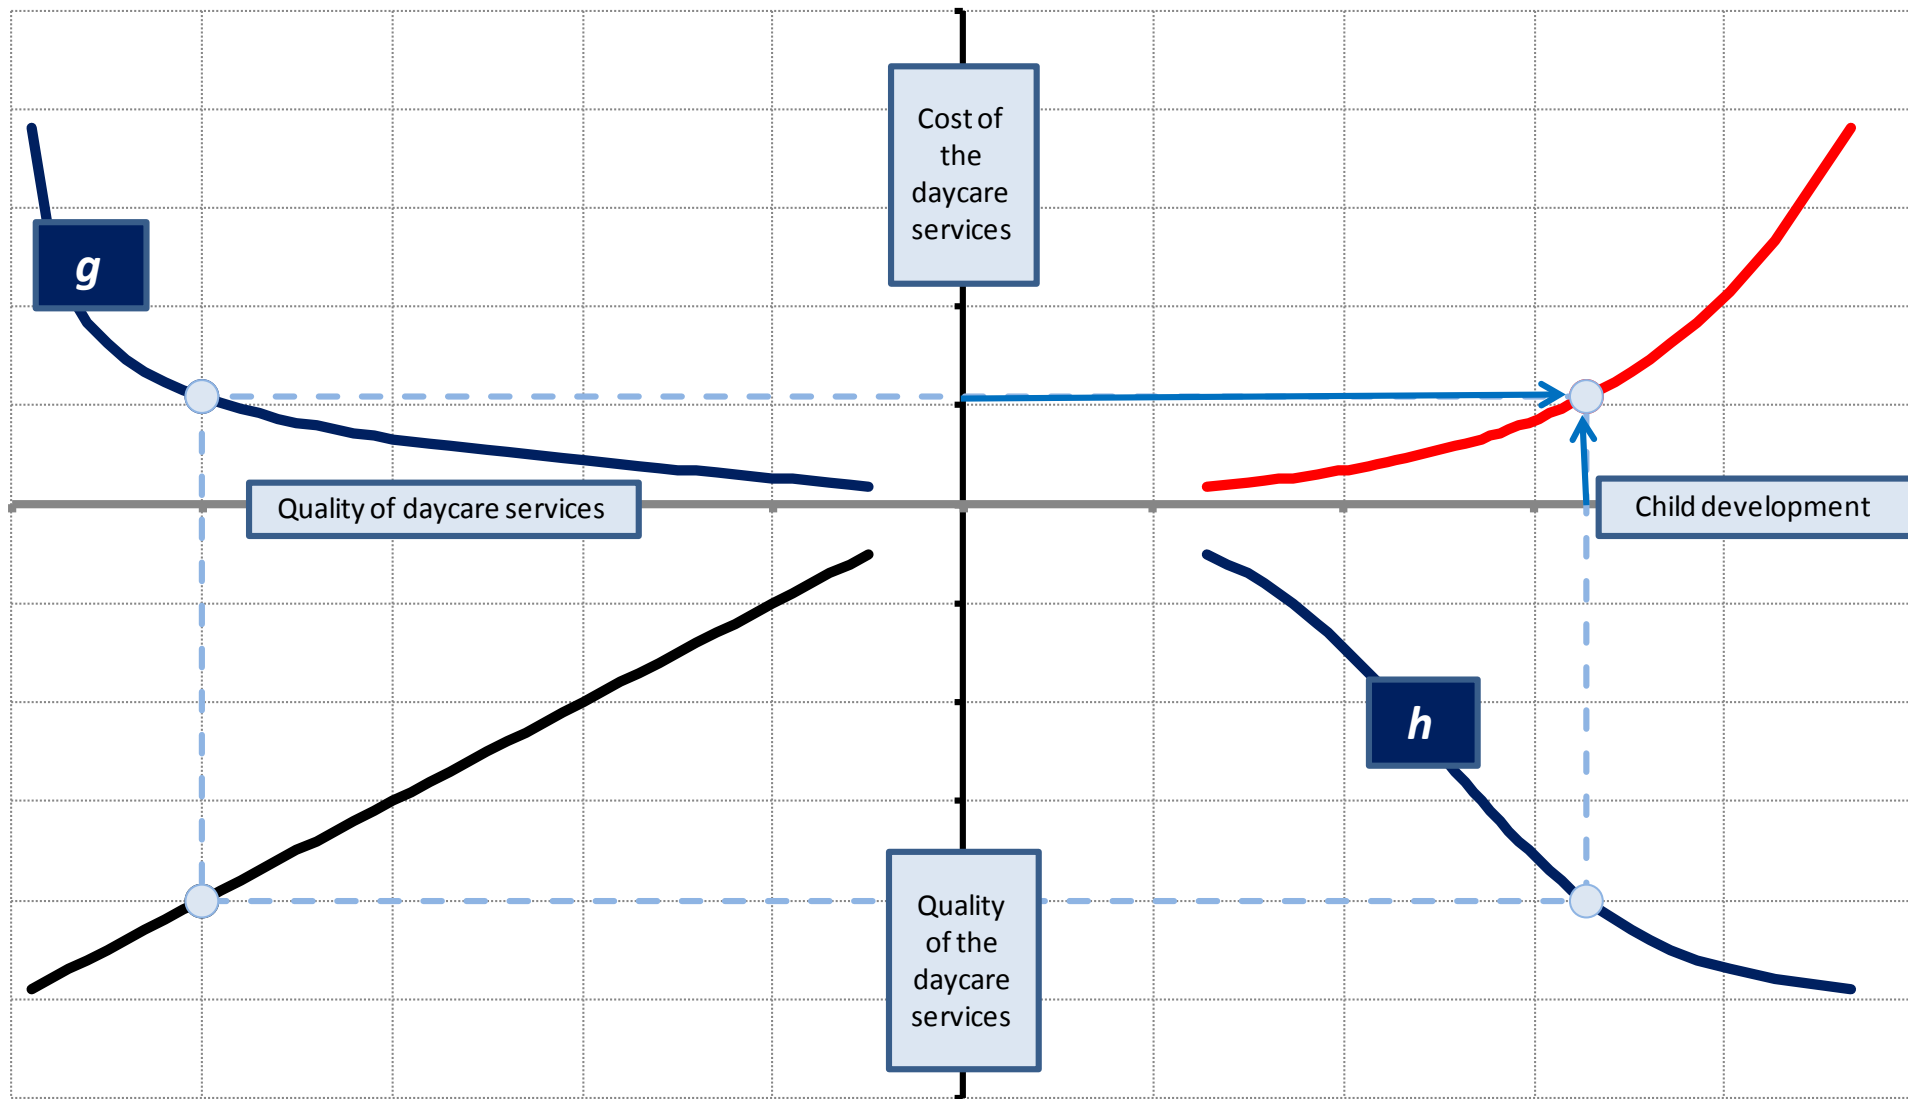

# Four alternative interpretations

1. Statistically non significant estimates result from the poor quality of the data
2. Weak statistical results are caused by fragile identification strategy (problems with internal validity)
3. *Small impact results from the low quality of daycare services in the past (problems with external validity)*
4. Daycare really do not have important impacts on child development

## Main issues

- **How important is the quality of daycare services for child development?**
- **To which extent does the extra cost of quality compensate for its additional impact?**

**Diagram 1: Relationship between quality and cost of daycare services and child development**

# Nature of Data Collection

- **Evaluation of the economic cost of 100 daycare centers in Rio de Janeiro Municipality.**
- **Objective evaluation of the quality of these 100 daycare centers (469 items, 15 dimensions).**
- **Evaluation of the development age of a sample of 10 children per daycare center (total of 1000 children evaluated).**
- **Collection of information on family socioeconomic conditions for each child in the study (household survey).**

**Composition of the Day Care Quality Indicator  
Municipality of Rio de Janeiro**

| <b>Macro-dimensions</b>             | <b>Dimensions</b>   | <b>Sub-dimensions</b> | <b>Indicators</b> |
|-------------------------------------|---|-----------------------|-------------------|

Source: Estimates based on the survey "Evaluation of Daycare Services in the Municipality of Rio de Janeiro", 2001 IPEA/UNESA.

Technical Note: Dependent variable: Logarithm of unit cost.

# Main Findings

1. The development age of children who attended high-quality day care centers is, on average, 1.3 months (18% of a standard deviation) higher than for those attending low-quality day cares.
2. The costs associated with providing high-quality services are 72% higher than low-quality ones.
3. In sum, if we wish to increase the age of development by 1 month (14% of a standard deviation) *via* an increase in service quality, we would need to increase service quality by 26 p.p., implying a 60% rise in costs.
4. Having assessed the impact of each one of the dimensions of day care quality on child development, we found that activities and curricular structure presents the highest impact.

# **B. On the Impact of Fulltime Public Day Care on Child Development**

---

# ***The Lottery Design***

- **Approximately 25,000 children applied for the 12,000 open slots in the 243 daycare centers**
- **Of these, approximately 24,000 were eligible**
- **Randomization was done by grade and center (depending on the slots available in each grade of each center)**
- **Each child was given a “ranking”**
- **Control children were put in a waiting list**

# ***Evaluating the Success of The Randomization Process***

# Family per capita income cumulative distribution

# ***Sample Design and Attrition***

- **Sample of 4350 children from 209 lotteries (combinations of age group and daycare)**
- **Balanced sample 5 to 20 treatment and controls for each lottery**
- **Sample draw from top of list (treatment) and bottom of list (control)**
- **No significant attrition bias: 87% (3777) children found in the 2008 household survey**
- **Balanced attrition: 49.4% treatments, 50.6% controls**
- **Short questionnaire collected in mid-2008 covering contact information, maternal labor supply and depression and family income**

## Exposure, No Show and Contamination

| Exposure  | Treatment | Control |
|---|-----------|---------|
| Attend daycare                                  | 93,9      | 55,0    |
| Attend public daycare                           | 93,9      | 46,5    |
| Attend the daycare the child has applied        | 91,6      | 37,6    |
| Attend other public daycare                     | 2,2       | 8,8     |
| Attend non public daycare                       | 0,0       | 8,5     |
| Attend non public non free daycare              | 0,0       | 4,3     |
| Do not attend daycare                           | 6,1       | 36,5    |
| Stay home                                       | 0,0       | 35,0    |
| "Mãe crecheira" or stay in community facilities | 0,0       | 1,5     |
| Others  | 6,1       | 8,6     |

# 2012 Follow-up

- Survey collected in second half of 2012,
- 4-5 years after initial enrolment
- Data collected just in six of the 10 regions of the city
- Each household visited by 2 enumerators
- One was a student of psychology, administering developmental assessments to children
- The other one would conduct a household survey with a single household respondent

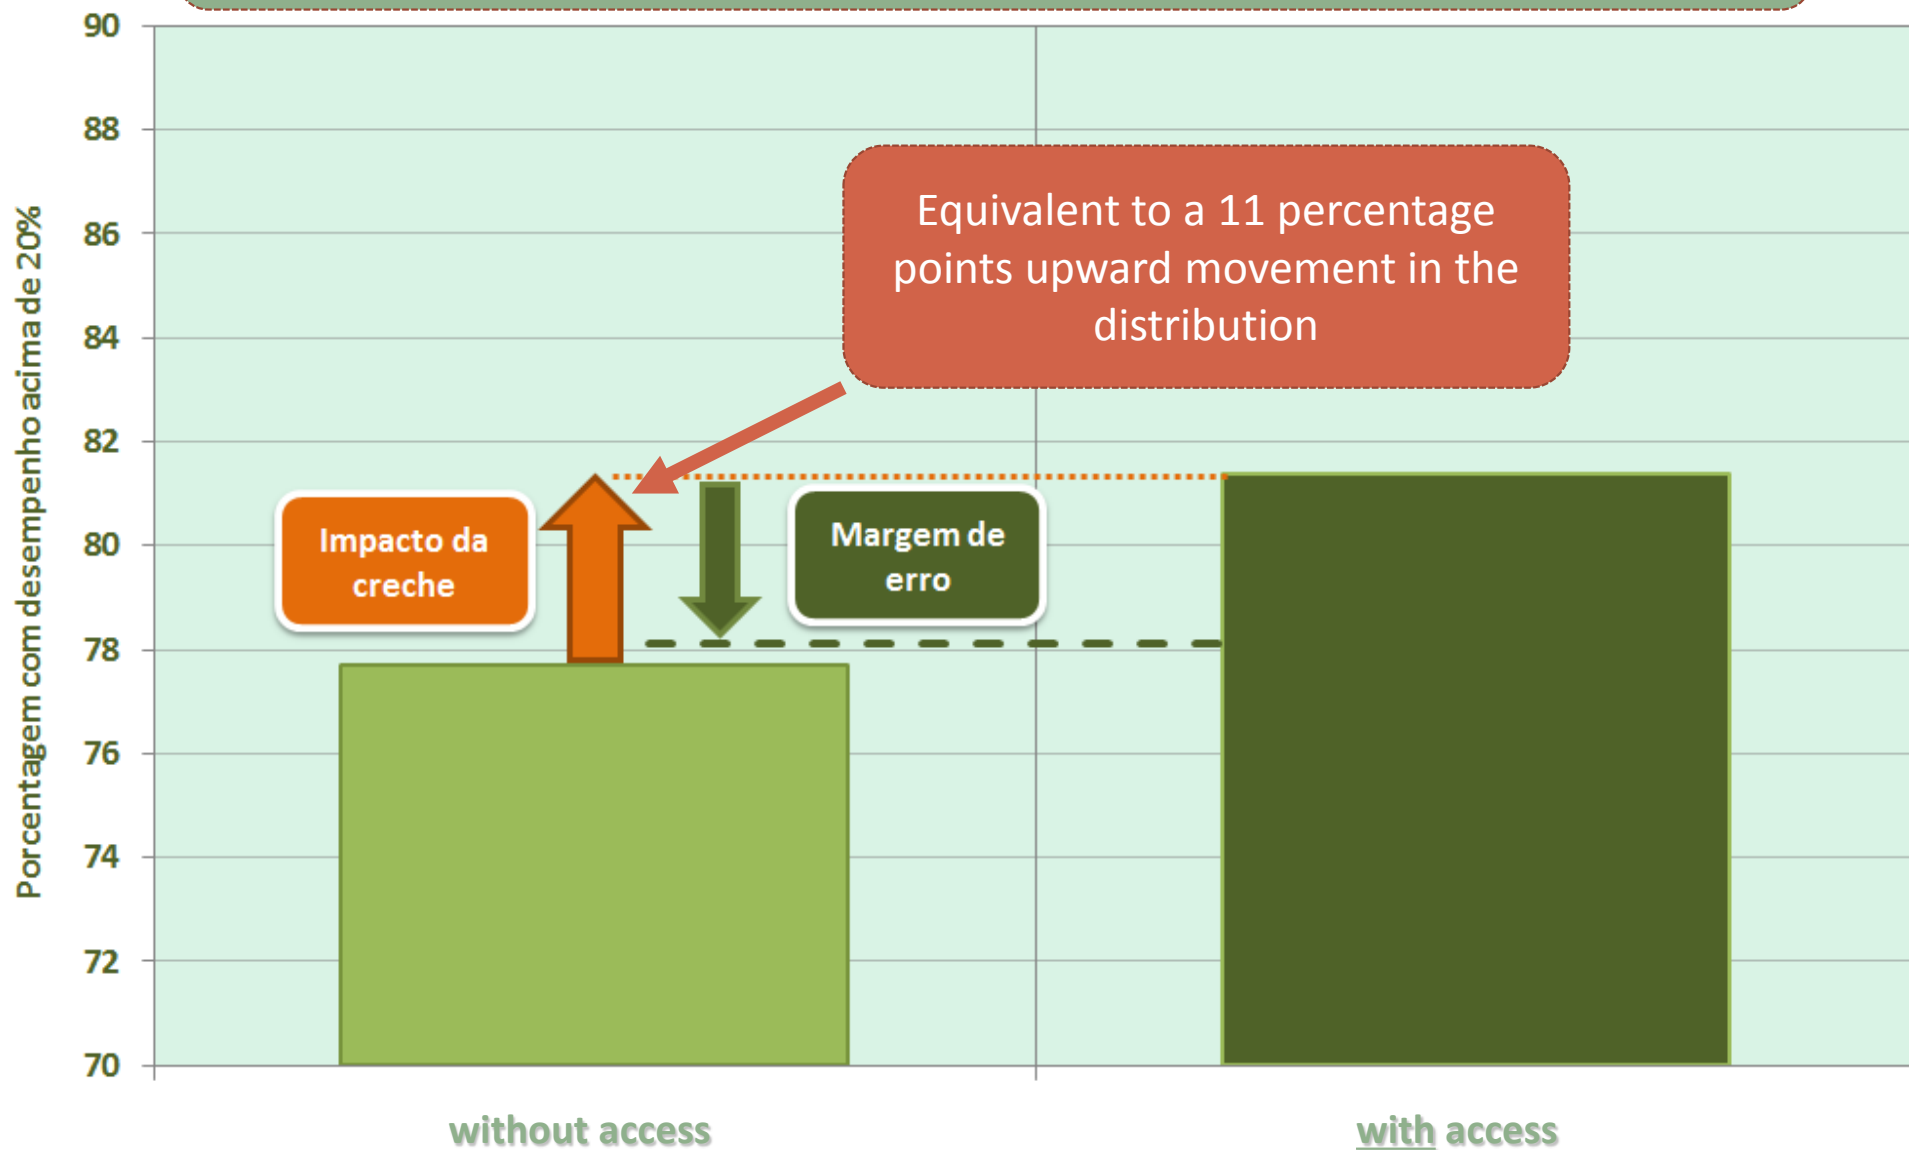

# Developmental Assessments

- Directly administered to child
  - ✓ PPVT – Verbal Reasoning
  - ✓ Woodcock-Johnson Memory for Names and Visual Integration
  - ✓ Executive Function (Inhibitory Control) – Pencil Tapping, Stroop, HTKS
- Maternal report
  - ✓ CBQ (five dimensions of child behavior),
  - ✓ ASQ (five dimensions of development)
- Also administer PPVT to mothers

# Household Survey

- Demographics
- Income and Labor Supply
- Time use (for child “guardian” figure)
- Basic expenditure (e.g., food)
- Basic assets and durables
- Child care history
- HOME environments
- Maternal depression

# Impact of going to a fulltime public daycare center on working memory

# Impact of going to a fulltime public daycare center on inhibitory control
