Challenges for the Design and Implementation of Programs Ensuring Early Childhood Comprehensive Attention

Ricardo Paes de Barros (INSPER/IAS)
Rosane Mendonça (UFF)
Presentation Plan

1. The importance and the components of early childhood comprehensive attention is known
2. Defining the roles of family and government in the provision of comprehensive care.
3. Brazilian Progress and the need for continuity
4. Monitoring child development
5. What is needed I? Focus on positive rights
6. What is needed II? Integration of public programs and between public and private actions
7. What do we need to know? Sequencing
Presentation Plan

1. The importance and the components of early childhood comprehensive attention is known
2. Defining the roles of family and government in the provision of comprehensive care.
3. Brazilian Progress and the need for continuity
4. Monitoring child development
5. What is needed I? Focus on positive rights
6. What is needed II? Integration of public programs and between public and private actions
7. What do we need to know? Sequencing
Presentation Plan

1. The importance and the components of early childhood comprehensive attention is known

3. Brazilian Progress and the need for continuity
4. Monitoring child development
5. What is needed I? Focus on positive rights
6. What is needed II? Integration of public programs and between public and private actions
7. What do we need to know? Sequencing
Roles of Family and Government

- Confusion between comprehensive attention and care through public programs.
- Complementarity or substitution between family actions and governmental programs.
- Fulltime versus part-time daycare centers.
- Home visits for all versus home visits just for the most vulnerable groups.
Presentation Plan

1. The importance and the components of early childhood comprehensive attention is known
2. Defining the roles of family and government in the provision of comprehensive care.
3. Brazilian Progress and the need for continuity
4. Monitoring child ‘development
5. What is needed I? Focus on positive rights
6. What is needed II? Integration of public programs and between public and private actions
7. What do we need to know? Sequencing
Evolution of Infant Mortality Rate: 1990-2011

MDG to be reached in 2015
Child mortality (up to 5 years old) rate in Brazilian Municipalities: 1991

Source: HDI-M Atlas
Child mortality (up to 5 years old) rate in Brazilian Municipalities: 2010

Source: HDI-M Atlas
Coverage double in 10 years
Evaluating the contribution of improvements is socioeconomic status of families

Decomposition of the drop in child mortality between sectoral social programs and socio-economic status

Drop in mortality rates: 64%

Source: SAE/PR, based on Demographic Census of 2000 and 2010 and HDI as calculated by the UNDP, Human Development Report.
Although socioeconomic progress has been of great help, the vast majority of the improvement in child development was due to sectorial public programs.

Decomposition of the drop in child mortality between sectoral social programs and socio-economic status.
Supply of basic care services for early childhood

Health:
- 50 thousand family health care teams – ESF,
- 66% of population covered,
- 265 thousand community health agents – PACS and
- 24 thousand dental care teams - ESD.

Social Assistance:
- 8 thousand one-stop-shops for social protection – CRAS,
- 91% with Program of integrated family care – PAIF,
- 98% of the Brazilian municipalities with at least one one-stop-shop for social protection.

Education:
- 2,5 million children attending 50 thousand childcare centers.
- More of 25% of the 0-3 population covered.
Innovative Local Early Childhood Programs
Legislation and Institutional Advances

- Child and Adolescent Rights Statute – ECA
- “Marco Legal” (Legal References) for Early Childhood Development
- Subscribing the UN document “A World Fit for Children”
- Strengthening and expansion of the number of Child Guardianship Councils (Conselhos Tutelares) – present in 98% of municipalities
- Strengthening of the State and Municipal Councils for the Protection of the Rights of Children – present in 92% of municipalities.
- Strengthening of Childhood and Adolescence Development Funds (FIA).
Probability of survival, children born last year: Brazil, 1993 e 2013

Inequality among socioeconomic groups also declined at a fast pace -- greater equality of opportunity --

Sluggish progress among groups with very high levels of vulnerability

A Guide to General Comment 7:
‘Implementing Child Rights in Early Childhood’

United Nations Committee on the Rights of the Child
United Nations Children’s Fund
and Bernard van Leer Foundation

Data collection

6. The Committee reiterates the importance of comprehensive and up-to-date quantitative and qualitative data on all aspects of early childhood for the formulation, monitoring and evaluation of progress achieved and impact assessment of policies. In view of the lack, in many States parties, of adequate national data collection systems on early childhood for all areas covered by the Convention and that specific and disaggregated information on children in early years are not readily available, the Committee urges all States parties to develop a system of data collection and indicators consistent with the Convention and disaggregated by gender, age, family structure, and urban and rural residence, and other relevant categories. This system should cover all children up to the age of 18 years, with specific emphasis on early childhood, particularly children belonging to vulnerable groups.
Canada is a signatory to the United Nations Convention on the Rights of the Child, which commits us to ensuring that all children are provided with the opportunities they need to develop cognitively, physically, socio-emotionally and spiritually. The ability to comply with this commitment requires a system that monitors early childhood outcomes. How else can we guarantee that all children and their families have the support and resources they need to thrive?

Canadian Early Years TaskForce

**Members:** Robin Williams MD (Chair until June 30, 2011); Sue Bennett MD; Jean Clinton MD; Clyde Hertzman MD; Denis Leduc MD; Andrew Lynk MD

510 milestones
Presentation Plan

1. The importance and the components of early childhood comprehensive attention is known
2. Defining the roles of family and government in the provision of comprehensive care.
3. Brazilian Progress and the need for continuity
4. Monitoring child development
5. What is needed I? Focus on positive rights
6. What is needed II? Integration of public programs and between public and private actions
7. What do we need to know? Sequencing
From an approach based on negative rights to an approach based on positive rights

**Traditional approach:**

- Based on guaranteeing basic negative rights.
- For instance, guaranteeing the child will *not:* (i) die, (ii) get sick or (iii) be hungry
- Hence, the focus of reducing (i) mortality rates, (ii) morbidity rates and (iii) malnutrition rates
- Emphasis on actions aimed at (i) defense of rights, (ii) protection, (iii) prevention of violation of rights
- Hence the concentration on avoiding (i) negligence and disregard, (ii) violence, e (iii) abuse e cruelty
Focus on positive rights:

Directed to
(i) Complete development of the potential of every child and for
(ii) The promotion of his well-being during childhood.

Focus on:
(i) Opportunities to play,
(ii) Development of motor skills,
(iii) Capacity to communicate,
(iv) Cognitive potential,
(v) Opportunities to develop progressive autonomy,
(vi) Development of social and emotional skills

From an approach based on negative rights to an approach based on positive rights
From an approach based on negative rights to an approach based on positive rights

Focus on positive rights:

Emphasis on child development

Require actions of four types:

(i) Opportunities necessary for each child to develop his full potential;
(ii) Condition for each child be able to fully benefit from the available opportunities;
(iii) Information and advise for parents to ensure their children have and effective access to the available opportunities;
(iv) Stimulation, interaction and incentives to ensure children fully benefit from the available opportunities
Presentation Plan

1. The importance and the components of early childhood comprehensive attention is known
2. Defining the roles of family and government in the provision of comprehensive care.
3. Brazilian Progress and the need for continuity
4. Monitoring child development
5. What is needed I? Focus on positive rights
6. What is needed II? Integration of public programs and between public and private actions
7. What do we need to know? Sequencing
Components of an Integrated Program Offering Comprehensive Care for Early Childhood Development

- Unification or consolidation of:
  - Program’s name
  - Local governance
  - Calendar of activities
  - Center for accessing all benefits and services
  - Personal records
  - Offer of services
  - System to evaluate children’s development
- Customization
  - Individual development plan
  - Individual servicing plan (at home and at local center)
Objectives of an Integrated Program Offering Comprehensive Care for Early Childhood Development

- To promote the complete development of the potential of each child;
- To ensure all parents can give to their children the best available attention, care and opportunities;
- To take advantage of all synergies among all sectorial actions and services available in the community;
- To promote intense community participation in providing comprehensive care for early childhood development.
Presentation Plan

1. The importance and the components of early childhood comprehensive attention is known
2. Defining the roles of family and government in the provision of comprehensive care.
3. Brazilian Progress and the need for continuity
4. Monitoring child development
5. What is needed I? Focus on positive rights
6. What is needed II? Integration of public programs and between public and private actions
7. What do we need to know? Sequencing
Phases in the Construction of a System to Provide Comprehensive Care to Early Childhood Development

1. Expansion of coverage of programs devoted to early childhood development
2. Improvements on the quality of public and private services
3. Integration of available supply of services and programs aimed at early childhood development

Source: Barros, Ricardo and Mendonça, Rosane. Uma avaliação dos custos e benefícios da educação pré-escolar no Brasil, July, 1999, IPEA.

Note: This study was used as a background paper for: Young, Mary Eming. From Early Child Development to Human Development: Investing in Our Children’s Future.
Four alternative interpretations

1. Statistically non significant estimates result from the poor quality of the data
2. Weak statistical results are caused by fragile identification strategy (problems with internal validity)
3. Small impact results from the low quality of daycare services in the past (problems with external validity)
4. Daycare really do not have important impacts on child development
Main issues

- How important is the quality of daycare services for child development?
- To which extent does the extra cost of quality compensate for its additional impact?
Diagram 1: Relationship between quality and cost of daycare services and child development
Nature of Data Collection

- Evaluation of the economic cost of 100 daycare centers in Rio de Janeiro Municipality.
- Objective evaluation of the quality of these 100 daycare centers (469 items, 15 dimensions).
- Evaluation of the development age of a sample of 10 children per daycare center (total of 1000 children evaluated).
- Collection of information on family socioeconomic conditions for each child in the study (household survey).

</tr>
</tbody>
</table>

Technical Note: Dependent variable: Logarithm of unit cost.
1. The development age of children who attended high-quality day care centers is, on average, 1.3 months (18% of a standard deviation) higher than for those attending low-quality day cares.

2. The costs associated with providing high-quality services are 72% higher than low-quality ones.

3. In sum, if we wish to increase the age of development by 1 month (14% of a standard deviation) via an increase in service quality, we would need to increase service quality by 26 p.p., implying a 60% rise in costs.

4. Having assessed the impact of each one of the dimensions of day care quality on child development, we found that activities and curricular structure presents the highest impact.
B. On the Impact of Fulltime Public Day Care on Child Development
The Lottery Design

- Approximately 25,000 children applied for the 12,000 open slots in the 243 daycare centers
- Of these, approximately 24,000 were eligible
- Randomization was done by grade and center (depending on the slots available in each grade of each center)
- Each child was given a “ranking”
- Control children were put in a waiting list
Evaluating the Success of The Randomization Process
Family per capita income cumulative distribution

- **Beneficiaries**
- **Waiting list**

Percentage of the population vs. Family per capita income (R$/month)
Sample Design and Attrition

- Sample of 4350 children from 209 lotteries (combinations of age group and daycare)
- Balanced sample 5 to 20 treatment and controls for each lottery
- Sample draw from top of list (treatment) and bottom of list (control)
- No significant attrition bias: 87% (3777) children found in the 2008 household survey
- Balanced attrition: 49.4% treatments, 50.6% controls
- Short questionnaire collected in mid-2008 covering contact information, maternal labor supply and depression and family income

2012 Follow-up

- Survey collected in second half of 2012,
- 4-5 years after initial enrolment
- Data collected just in six of the 10 regions of the city
- Each household visited by 2 enumerators
- One was a student of psychology, administering developmental assessments to children
- The other one would conduct a household survey with a single household respondent
Developmental Assessments

- Directly administered to child
  - PPVT – Verbal Reasoning
  - Woodcock-Johnson Memory for Names and Visual Integration
  - Executive Function (Inhibitory Control) – Pencil Tapping, Stroop, HTKS
- Maternal report
  - CBQ (five dimensions of child behavior),
  - ASQ (five dimensions of development)
- Also administer PPVT to mothers
Household Survey

- Demographics
- Income and Labor Supply
- Time use (for child “guardian” figure)
- Basic expenditure (e.g., food)
- Basic assets and durables
- Child care history
- HOME environments
- Maternal depression
Impact of going to a fulltime public daycare center on working memory

Equivalent to a 11 percentage points upward movement in the distribution
Impact of going to a fulltime public daycare center on inhibitory control

Equivalent to a 16 percentage points upward movement in the distribution
