Eligible Applicants: The foundation supports various organizations designed to foster new ideas and public policy on a variety of issues that benefit society, such as: public policy research, health and human services aligned with major therapeutic interests, academic relations, culture, education and youth development, community development, locally-aligned health care organizations, fence-row neighborhood groups, and diversity.

Summary: The Eli Lilly and Company Foundation, a tax-exempt private foundation established by the company in 1968, awards cash grants for philanthropic initiatives aligned with the company's corporate responsibility priorities. Specifically, the Foundation is dedicated to: Improving the lives of people who lack the resources to obtain quality healthcare. Our primary focus will be in low and middle income countries and strengthening public education in the United States, with an emphasis on science and math education. The main area of focus of the Lilly Foundation is to improve the lives of people, primarily those living in low and middle income countries, who lack the resources to obtain quality healthcare. The Foundation works in the area of chronic or non-communicable diseases, such as diabetes, cancer, and mental illness. The Foundation collaborates with effective global and local partners to find innovative solutions to complex problems and differentiate its work, in part, by an unwavering commitment to delivering long-term results. The Foundation uses this framework for our work in global health: research, report, and advocate. For research, in collaboration with partners, the Foundation sponsors efforts designed to find solutions to difficult challenges that represent barriers to improved health. The Foundation takes the same commitment Lilly has to innovation and research and apply it to its work in the Lilly Foundation. For report, the findings of the Foundation's research will be systematically reported to global stakeholders, with the express purpose of advancing knowledge regarding what works (and what doesn't). For advocate, the Foundation uses its assets and expertise to advocate for others to join the Foundation in replicating or ramping up solutions that prove to be effective. The Foundation is working to improve student performance in math and science in grades K-12 in the United States. The Foundation focuses its efforts primarily in Indiana—the home of Lilly's corporate headquarters. For Lilly to achieve its vision of improving global health in the 21st century, the company must have access to great scientists and operate in an environment that understands and values science and scientific innovation. This all starts with highly effective K-12 science and math education. The Foundation invests in organizations and programs that are best equipped to produce measurable improvements in these disciplines. The Foundation also advocates for broader support of effective ideas.
