

Coaching Parents to Implement a Social-Communication Approach with Children with Autism

Johanna Taylor, Ph.D., BCBA

UNIVERSITY OF
Nebraska
Lincoln

Agenda

- ▶ Overview of Project ImPACT
- ▶ Imitation and autism
- ▶ Research study
- ▶ Application
- ▶ Future directions

Project ImPACT

(Improving Parents as Communication Teachers)

- ▶ Manualized approach that coaches adults to promote social-communication skills during play and daily routines.

Project ImPACT

Home

Parent training is an essential component of successful early intervention and early childhood special education programs for children with autism spectrum disorders (ASD). Project ImPACT (Improving Parents as Communication Teachers) is an evidence-based parent training program that teaches parents to promote their child's social-communication skills during daily routines and activities. The program was developed by Brooke Ingersoll, PhD, BCBA-D and Anna Dvortcsak, MS, CCC-SLP. Our lab conducts research on the efficacy and effectiveness of this intervention program, as well as successful methods for training others to implement it.

BROOKE INGERSOLL, PHD, BCBA-D

Project ImPACT Research

Project ImPACT is considered an established intervention

- Ingersoll & Berger (2018) Parent engagement with a telehealth-based parent-mediated intervention program for children with autism spectrum disorders: Predictors of program use and parent outcomes. *Journal of Medical Internet Research*, 17(10).
- Ingersoll, B., Berger, N., Carlsen, D., & Hamlin, T. (2017). Improving social functioning and challenging behaviors in adolescents with ASD and significant ID: A randomized pilot feasibility trial of reciprocal imitation training in a residential setting. *Developmental Neurorehabilitation*, 20, 236-246.
- Pickard, K.E., Wainer, A.L., Bailey, K., & Ingersoll, B. (2016). A mixed-method evaluation of a telehealth-based parent-mediated intervention for children with ASD. *Autism: International Journal of Research and Practice*, 20, 845-855.

Project ImPACT

(Improving Parents as Communication Teachers)

▶ Skill acquisition targets:

- ▶ Social-engagement
- ▶ Language/communication
- ▶ Imitation
- ▶ Play

IMITATION IS the foundation of social-communication development

- ▶ Imitation is a “pivotal skill” we know children need to develop social-communication skills (Uzgiris, 1981).
- ▶ **Reciprocal (social) imitation**
 - ▶ serves to express interest and engagement between caregiver and child
 - ▶ leading to the development of communication, play skills, social skills, etc. (Halliday & Leslie, 1986; Mueller & Lucas, 1975).

IMITATION IS the foundation of social-communication development

Imitation defined: copying the behaviors of others.

Examples of behaviors that can be imitated:

- ▶ ***actions with objects*** (such as banging on a drum or pushing a car)
- ▶ ***gestures and body movements*** (such as clapping hands or waving)
- ▶ ***sounds or words***

Imitation in children with ASD

- ▶ Deficits in imitation skills are a core characteristic in people with ASD (Sigman, Dijamco, Gratier, & Rozga, 2004).
- ▶ Children with ASD have been found to:
 - ▶ engage in less spontaneous imitation than typically developing children (Whiten & Brown, 1999).
 - ▶ have greater deficits in imitation during naturalistic conditions (Ingersoll, 2008; Stone et al., 2004).

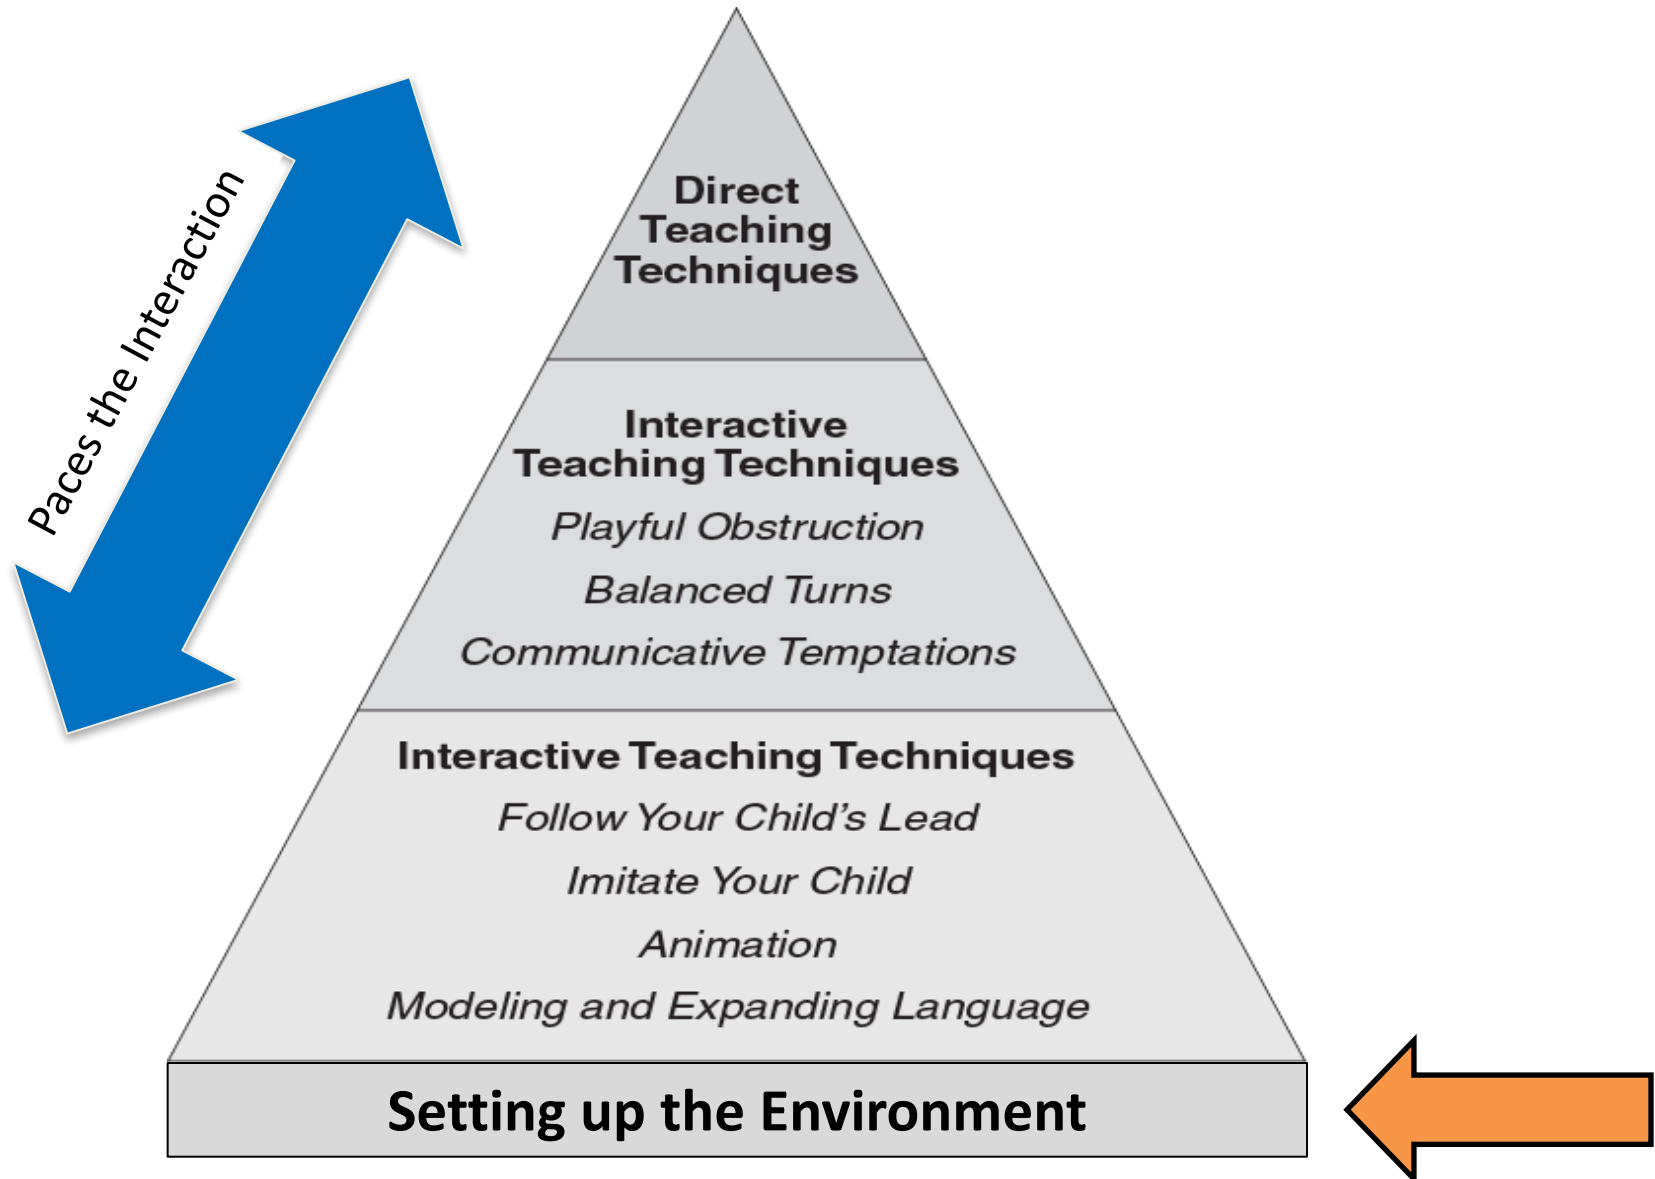

Project ImPACT

(Improving Parents as Communication Teachers)

- ▶ Two manuals included:
 - ▶ Parent
 - ▶ Trainer
- ▶ Schedule/goal development
- ▶ Outlines of strategies
- ▶ Fidelity checks
- ▶ Strategies build upon one another to make a comprehensive curriculum

Project ImPACT

Reduce Distractions

- Limit distractions such as phones, music, limiting foot traffic through play area.
- Turn off television. If this is a problem use a gradual fade technique.
- Decide which few toys will remain in view and acceptable and put other toys out of reach, or out of view.

Define a Play Space

- Define a play space – one that has visual and physical boundaries.
- Limits distractions and creates physical proximity between parent and child.
- Play space may be best in a child's bedroom, another room in the home, or rearranging of furniture in the living room.

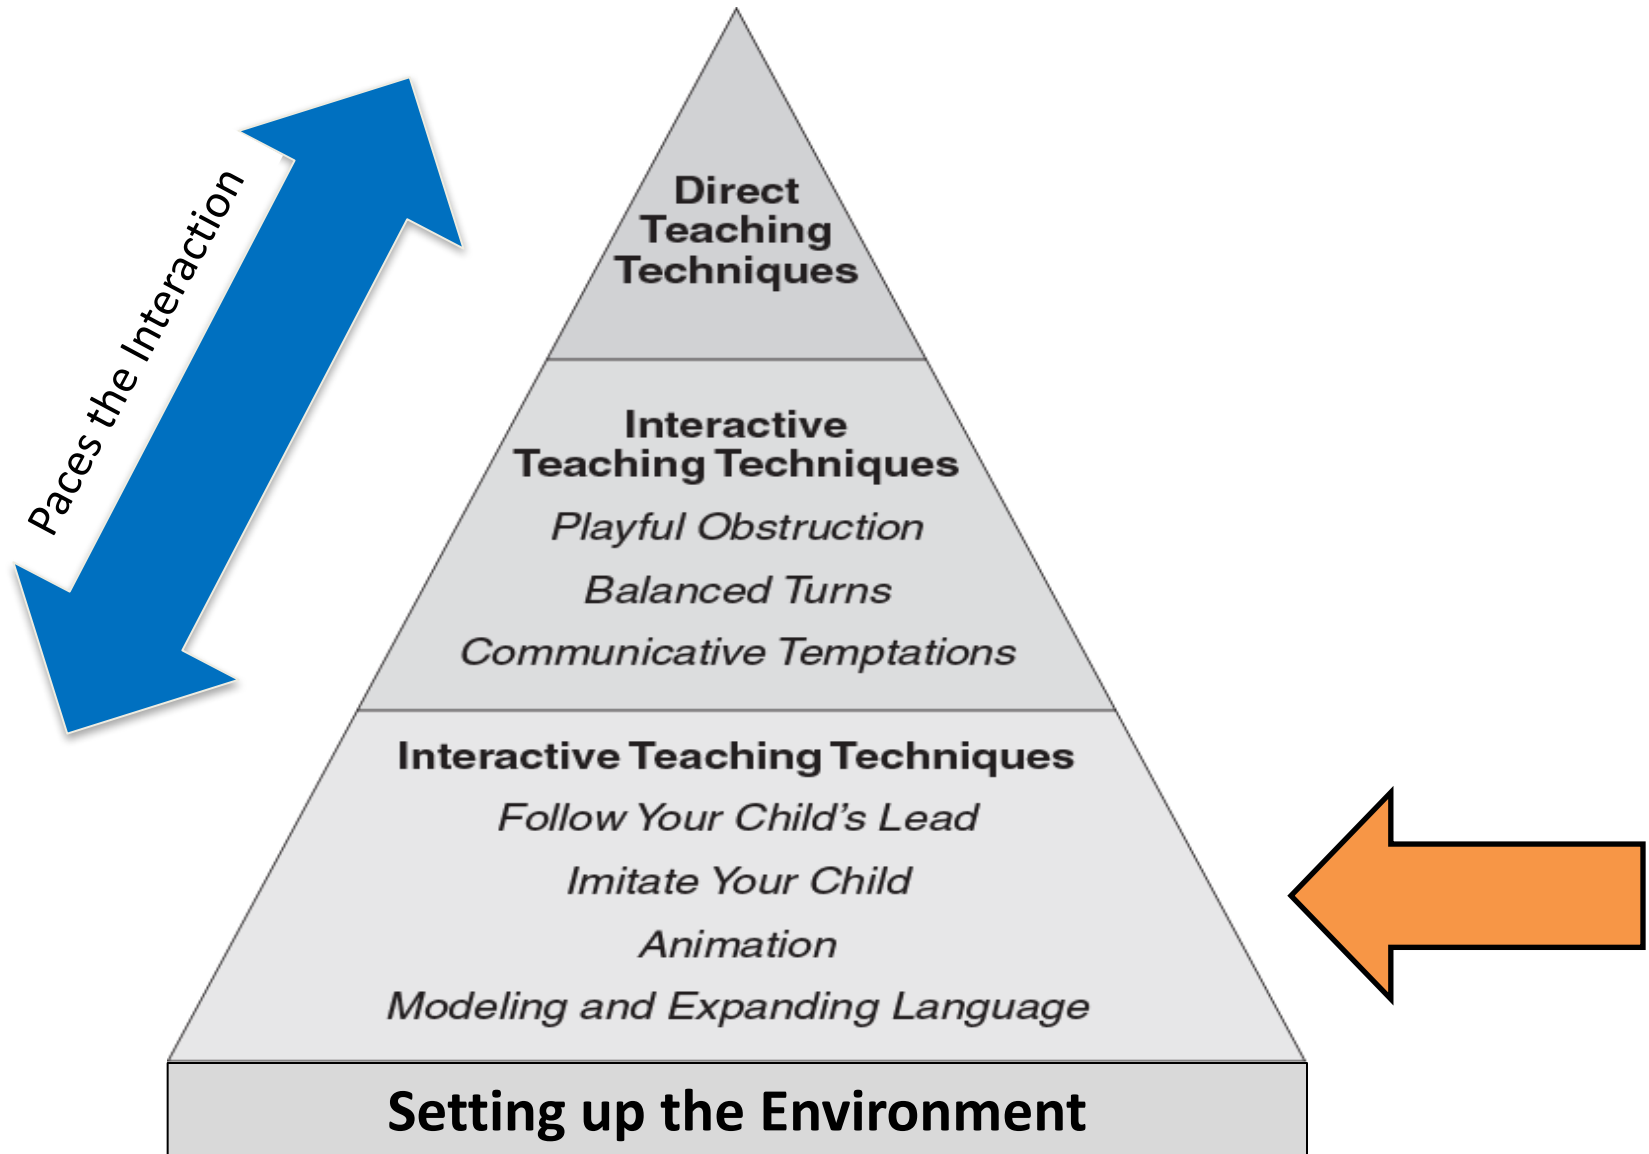

Set Up & Rotate Toys

- Children are most engaged when toys are rotated every 2-3 weeks.
- **Identify 6 – 8 pairs of toys** (two of each toy or similar toys) that the child enjoys.
- **Set up the pairs of toys in the play environment** so that the child can choose between the toys.

Schedule Playtime

- Schedule two, 20 minute blocks of time for social-communication (imitative) play.
- OR break into 5-minute segments throughout the day.
- Peers can be taught to use techniques.

Project ImPACT

Follow the Child's Lead

- Using the child's interests to teach increases generalization and spontaneous language.
- This technique is used to increase engagement and motivation during the play sessions.

Follow the Child's Lead (cont.)

- Let the child choose the activity.
- Stay face to face with the child.
- Join the child in play.
- Comment on play, but don't ask questions or give commands.
- Control the situation – be consistent with rules and consequences (do not let the child destroy property, hit others).

Imitate the Child

- Imitate play with toys.
- Imitate gestures and body movements.
- Imitate vocalizations.
- Only imitate appropriate behavior (flapping turned into clapping).

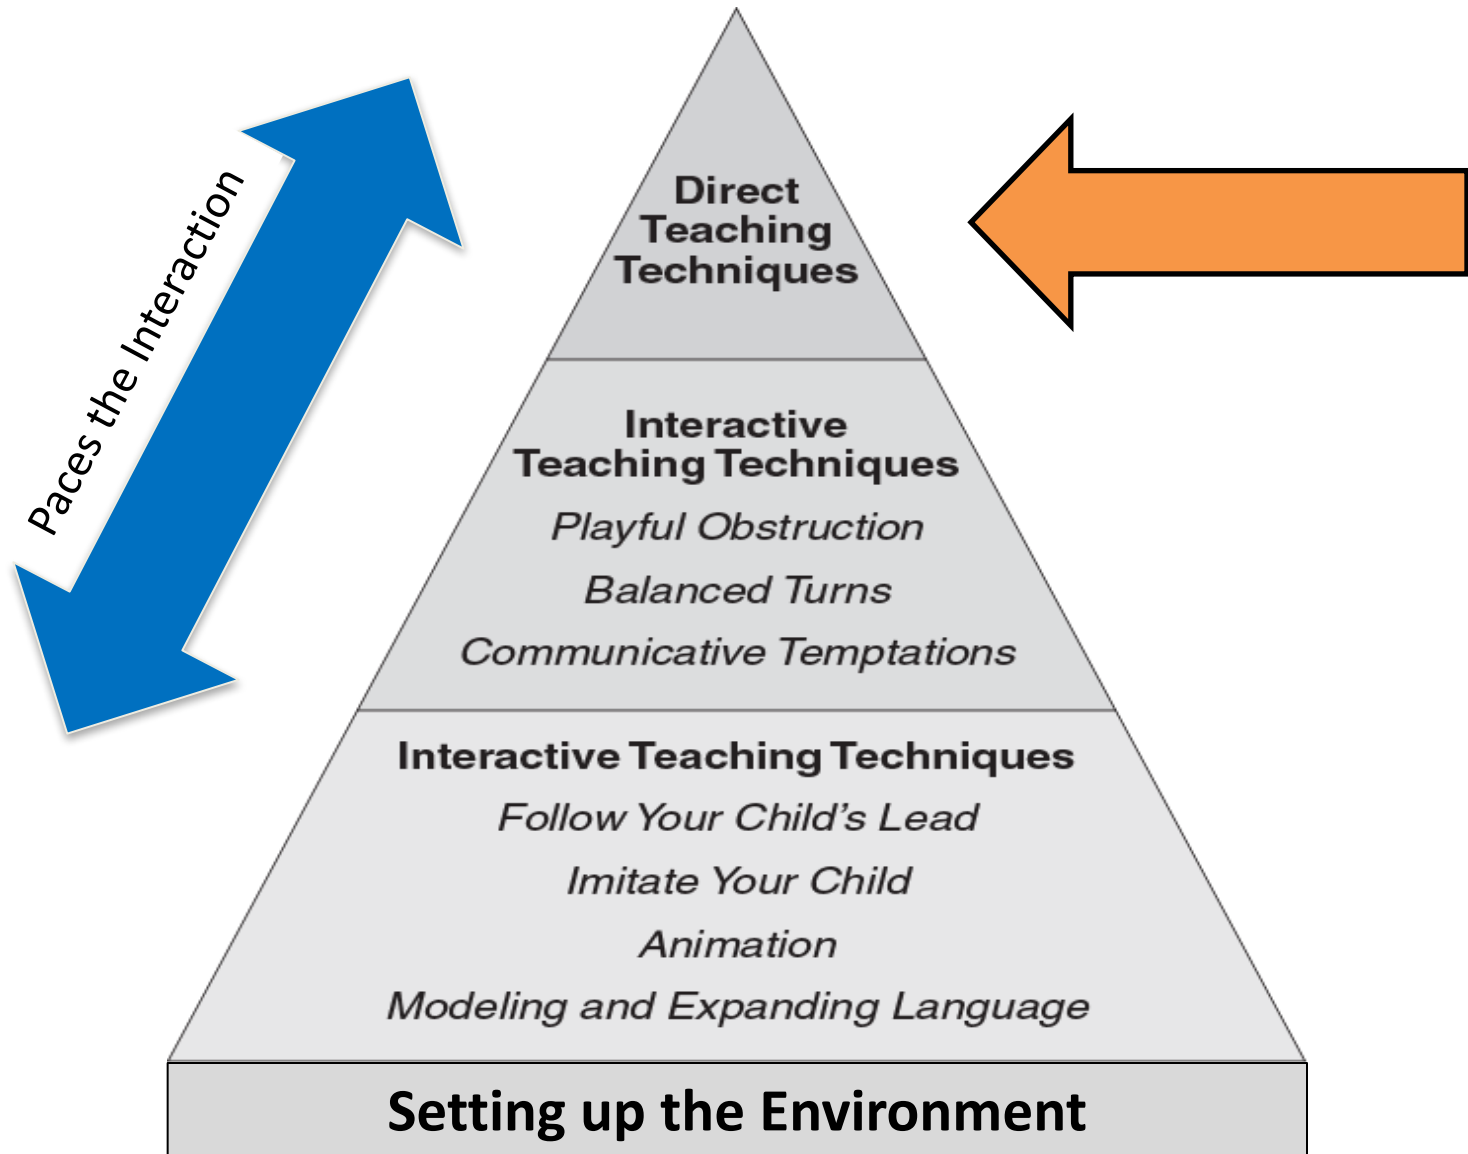

Animation

- Be excited about the activity – maintain eye contact, smiling and laughing, joining child in activity of interest.
- Exaggerate gestures, facial expressions, and vocal quality.
- Use attention getting words – “uh-oh, oh-no, wow”
- Wait with anticipation – pause with an exaggerated look.

Model & Expand Language

- Model language for your child determined by the child's developmental level.
- Expand by adding a word or two to what the child says.
- Eliminate demands (green block vs. what color block is it?).
- Be repetitive!

Project ImPACT

Six Steps to Direct Teaching

1. Use Follow the Child's Lead
2. Create an opportunity for the child to communicate.
3. Wait for the child to communicate.
4. Prompt the child to use more complex language, imitation, or play skills.
5. Provide a more supportive (helpful) prompt as necessary.
6. Reinforce and expand on the child's response.

When and What to Prompt

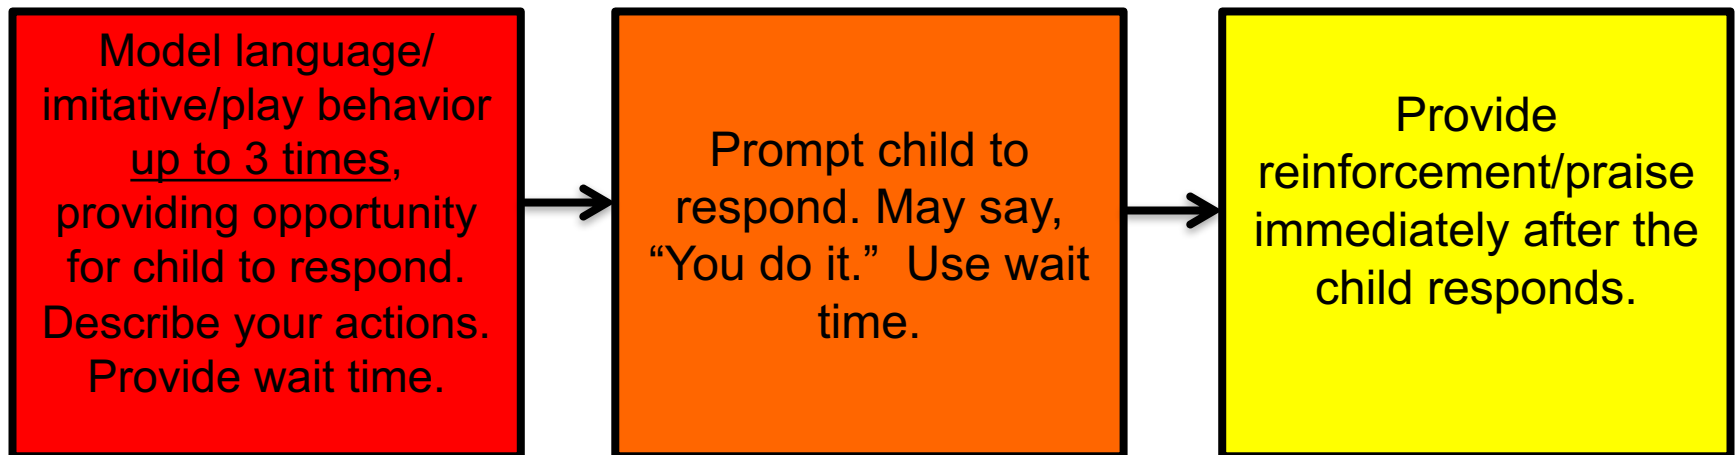

- When to prompt – prompt only when the clinician/parent has the child's attention.
- The best time to prompt is when the child is highly engaged
- Prompt the child to use a skill that is more complex than the skill he currently has.

Increasing the Complexity of Language, Imitation, or Play

Self-directed Internet-based Modules

Homework: 20-minute play session practice each day.

In vivo Coaching

- Review of parent practice.
- Video examples of parent's use of strategies.
- Question/answer opportunities.
- Brief review of concepts covered in module(s).
- Therapist modeling of strategies.

In vivo Coaching

- Parent practice of strategies while researcher observes and coaches.
- Constructive and positive feedback.
- Independent parent-child 10-minute play session with no therapist feedback (data collected).

Study Aims

PARENT:

- ① RIT strategies use
- ② maintenance of strategies
- ③ parent fidelity
- ④ stress

CHILD:

- ① motor imitation
- ② social-engagement*

Participants

Children:

- Four children diagnosed with autism.
- Ages ranged from 2 to 4 years.
- All severe and below developmental level with the exception of Nikhil.

Parents:

- Four mothers.
- Ages ranging from 34 to 41 years.
- Degrees ranging from associates to doctorate.

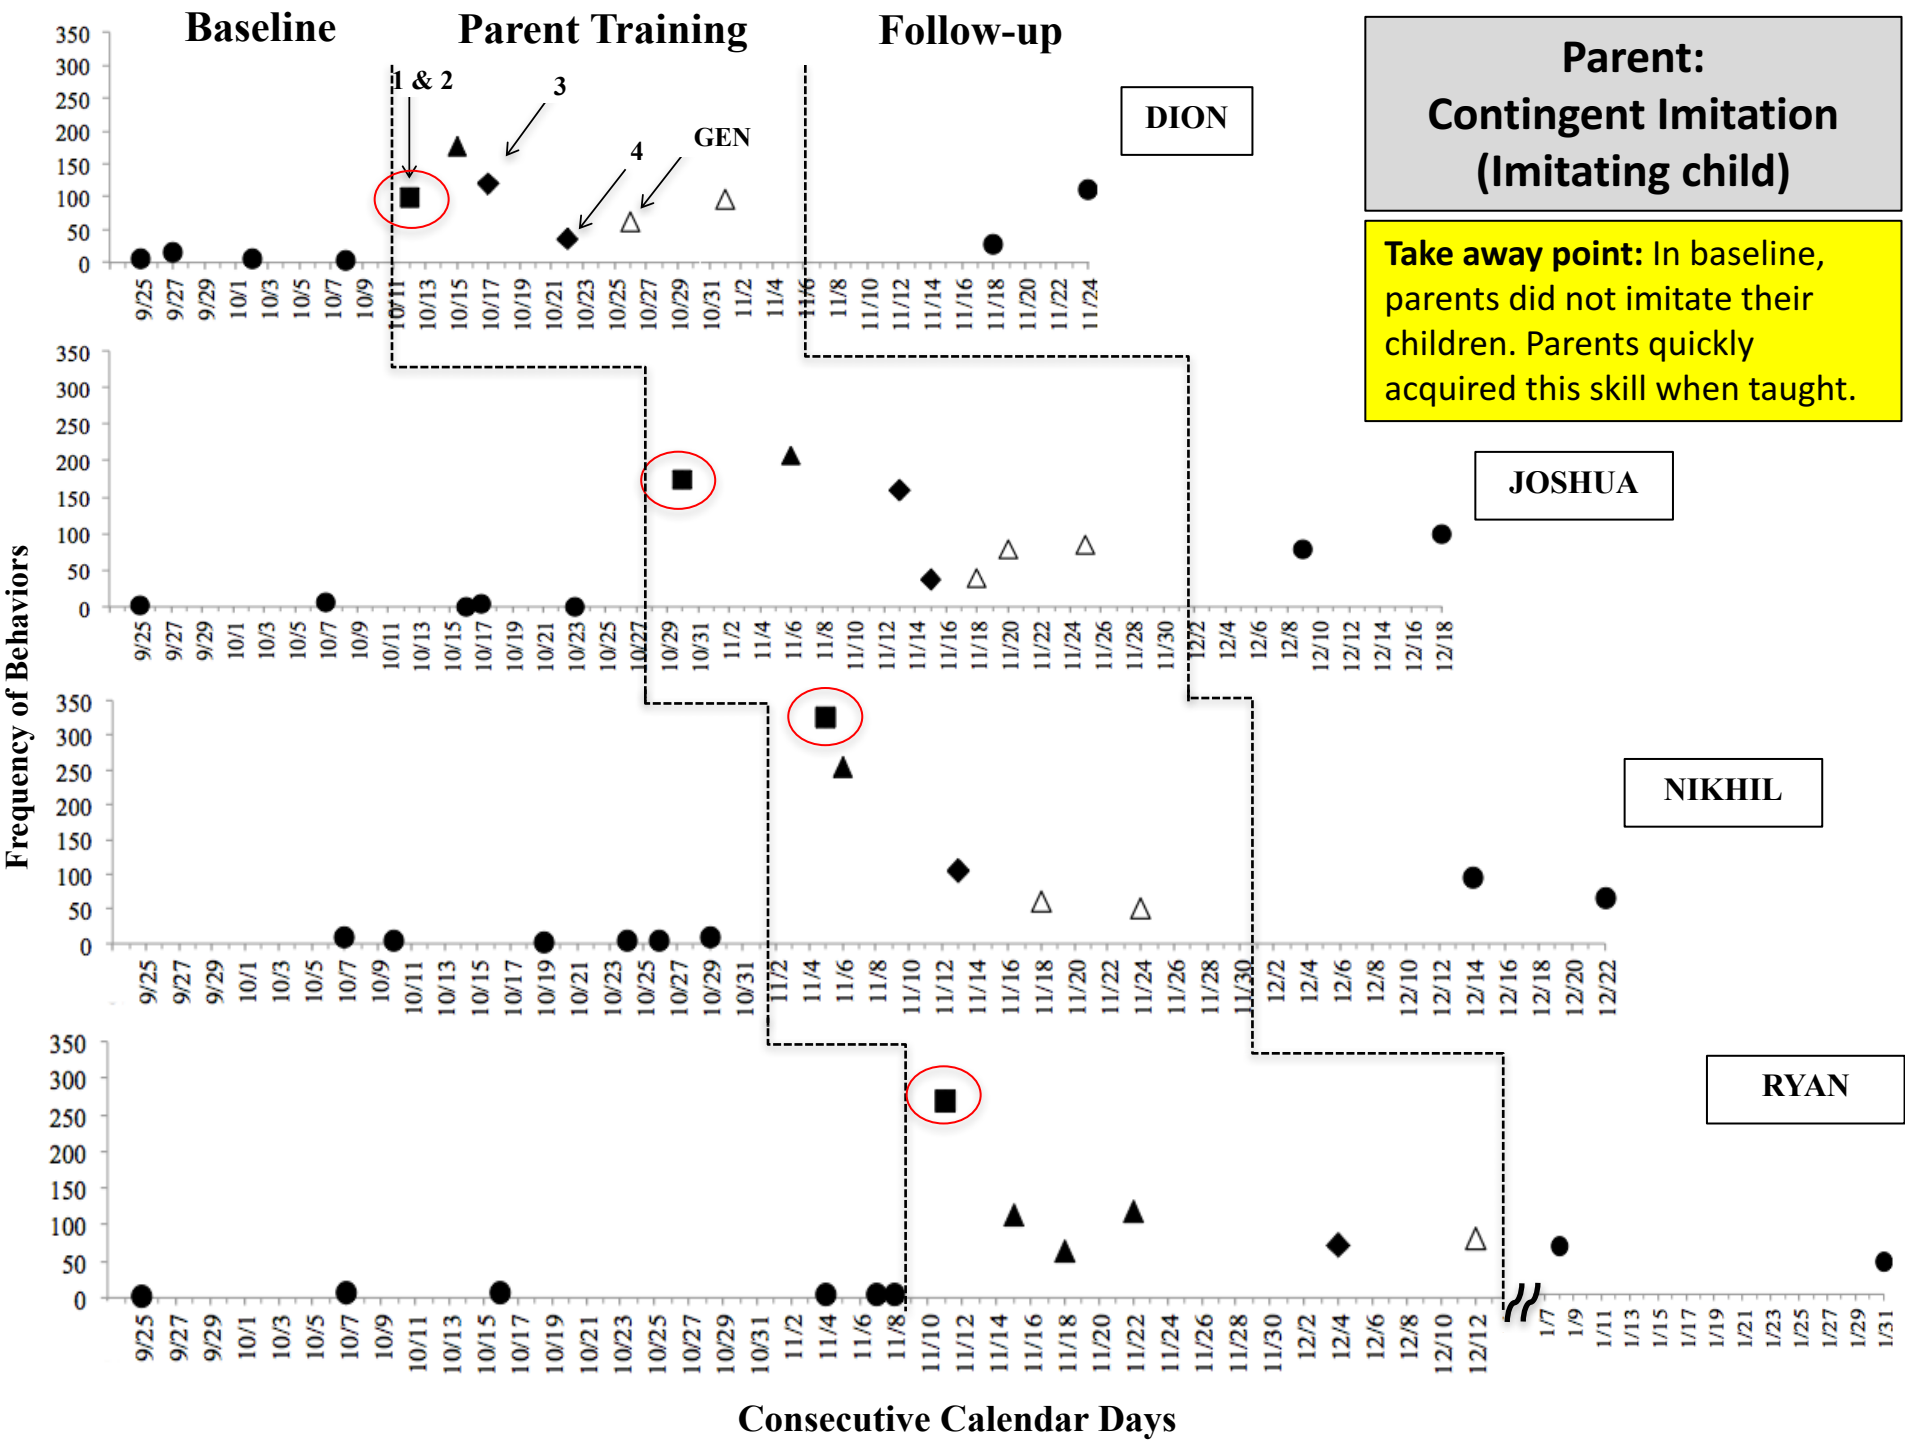

Research Design/Procedures

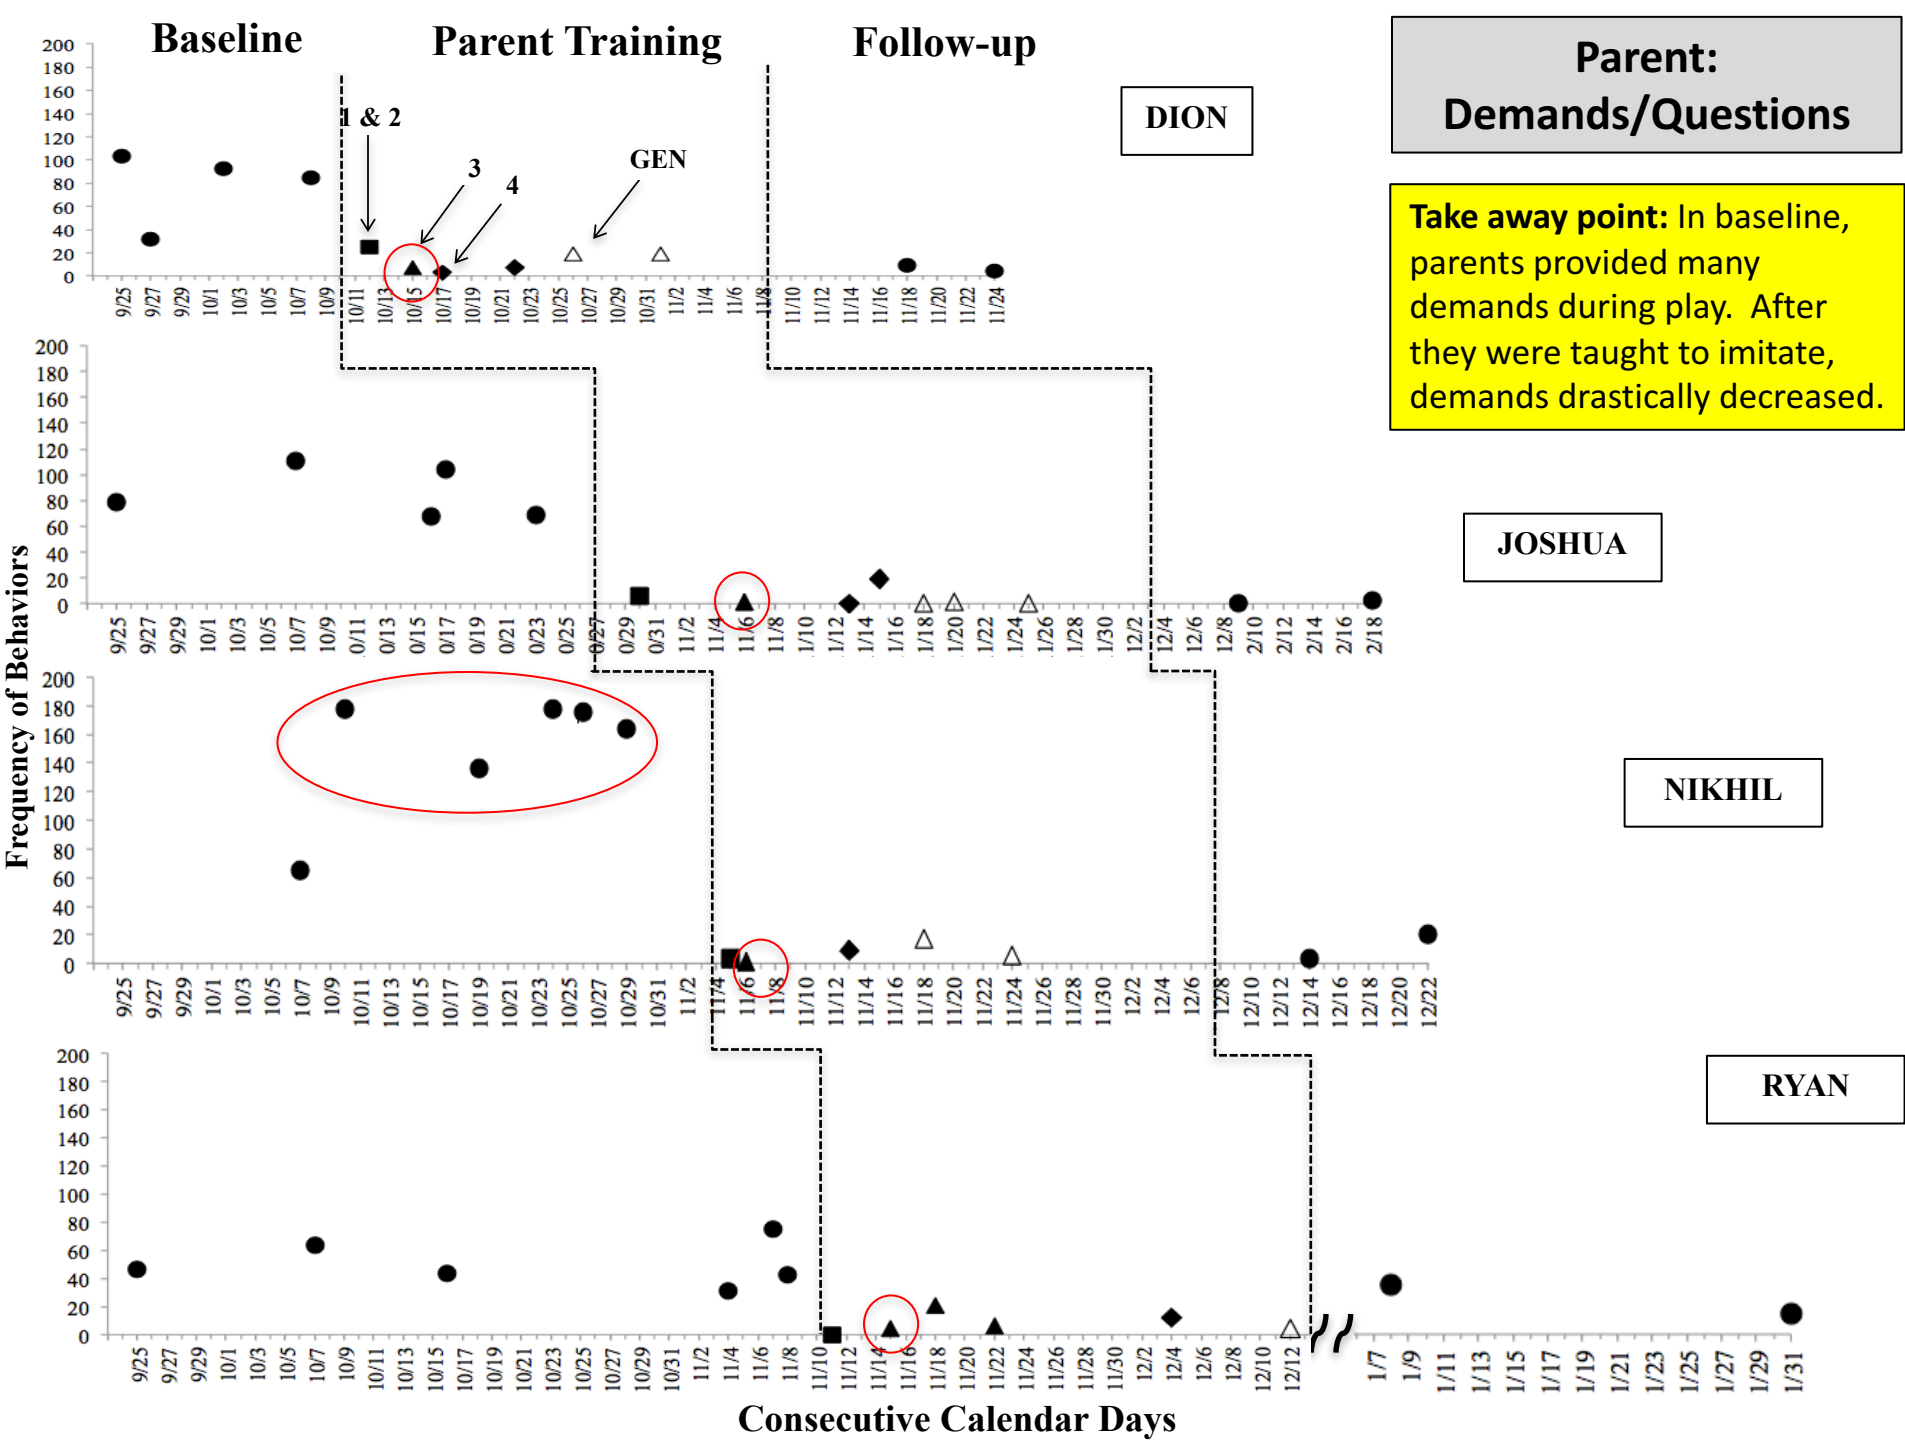

- **Multiple-probe design across four participants**

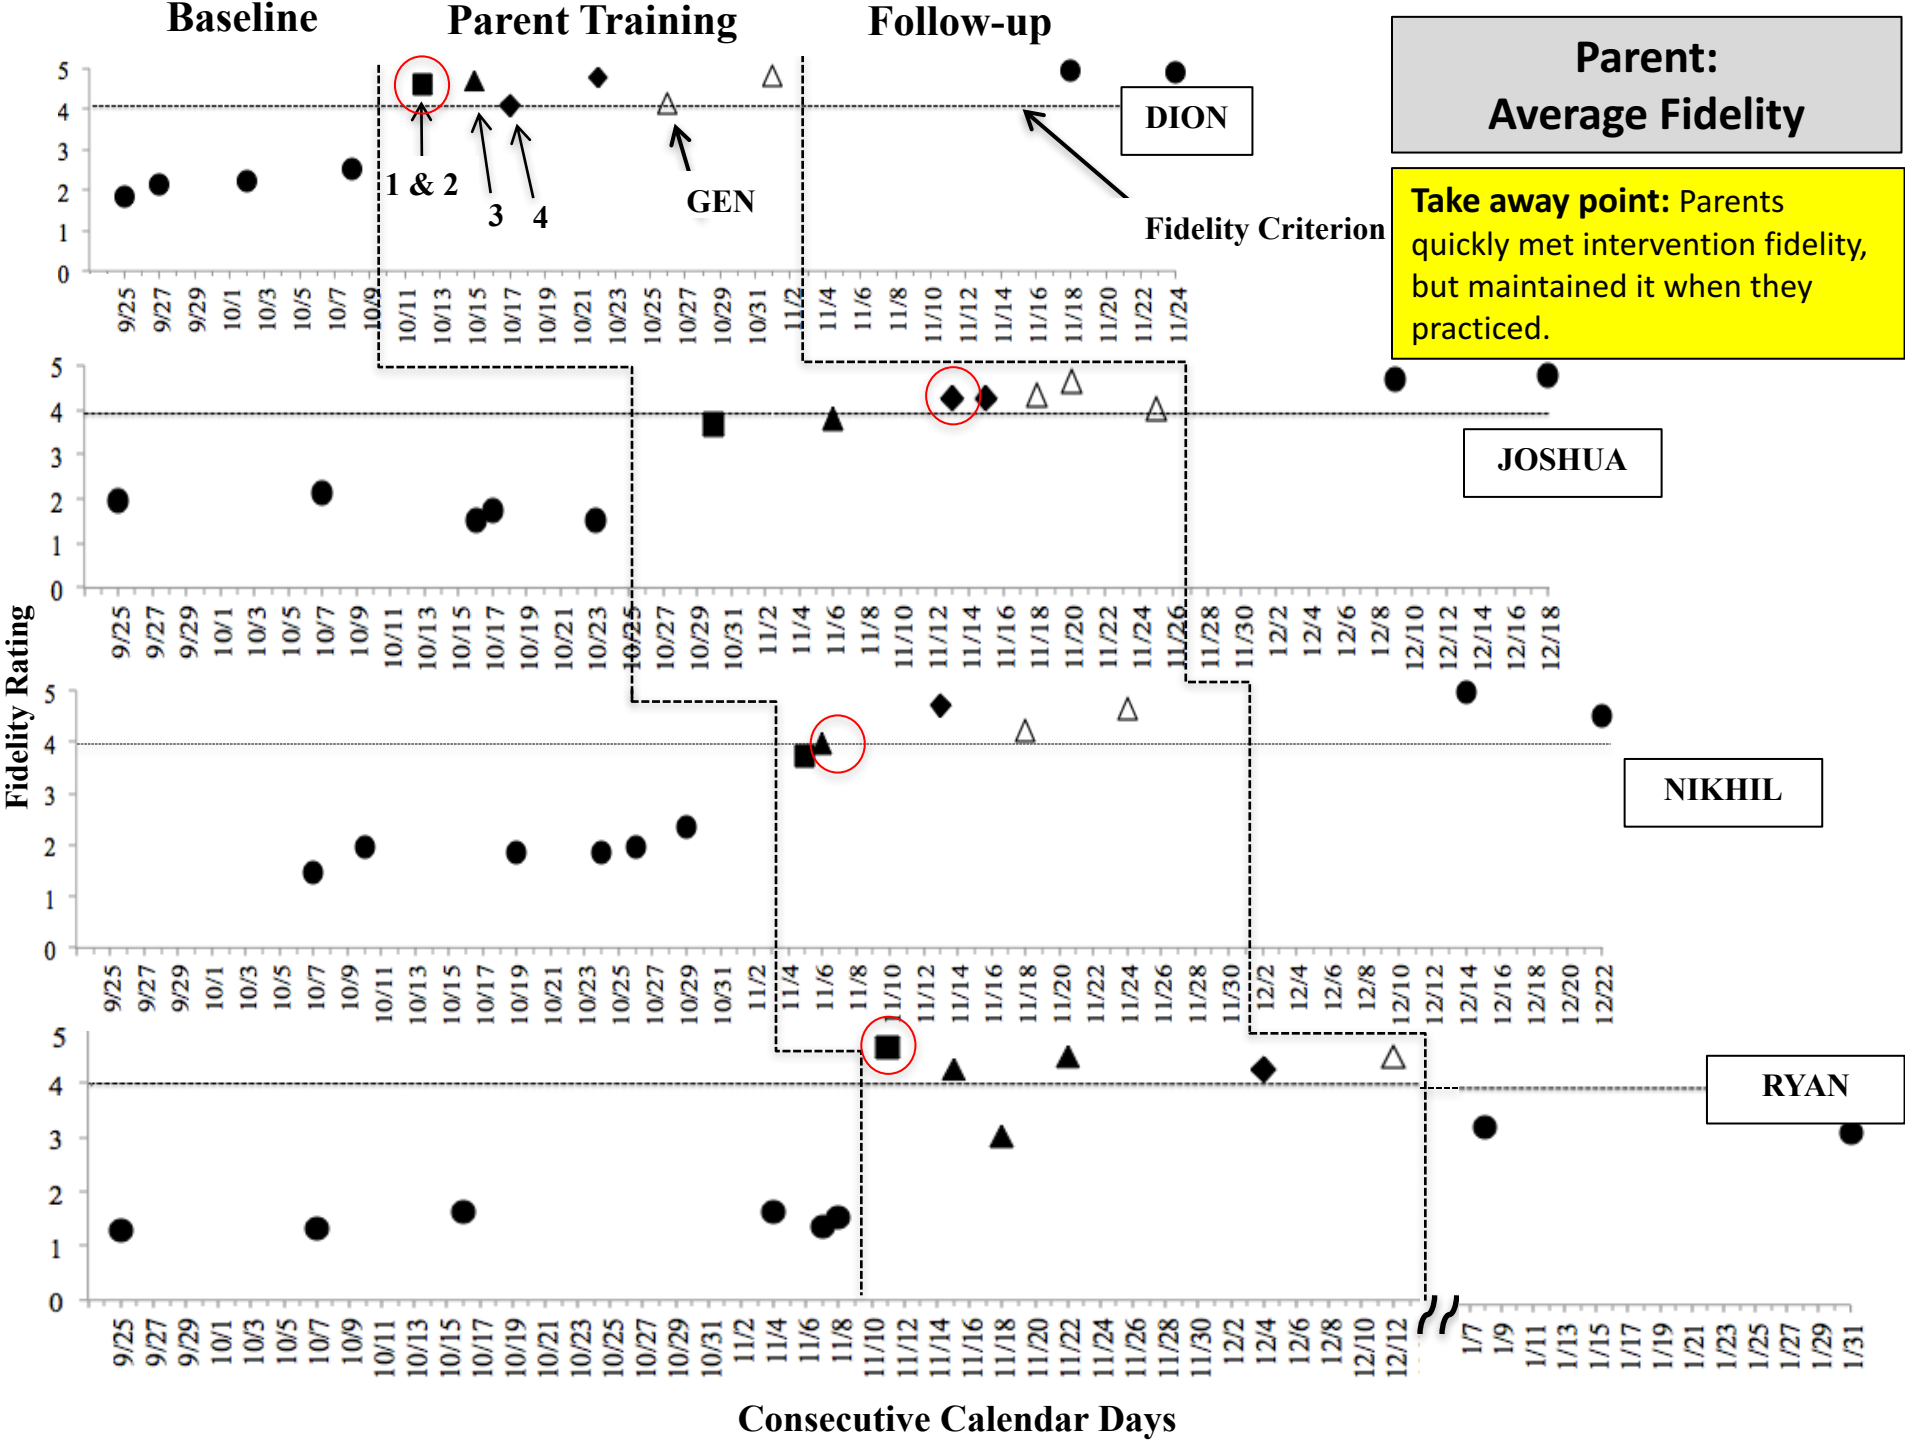

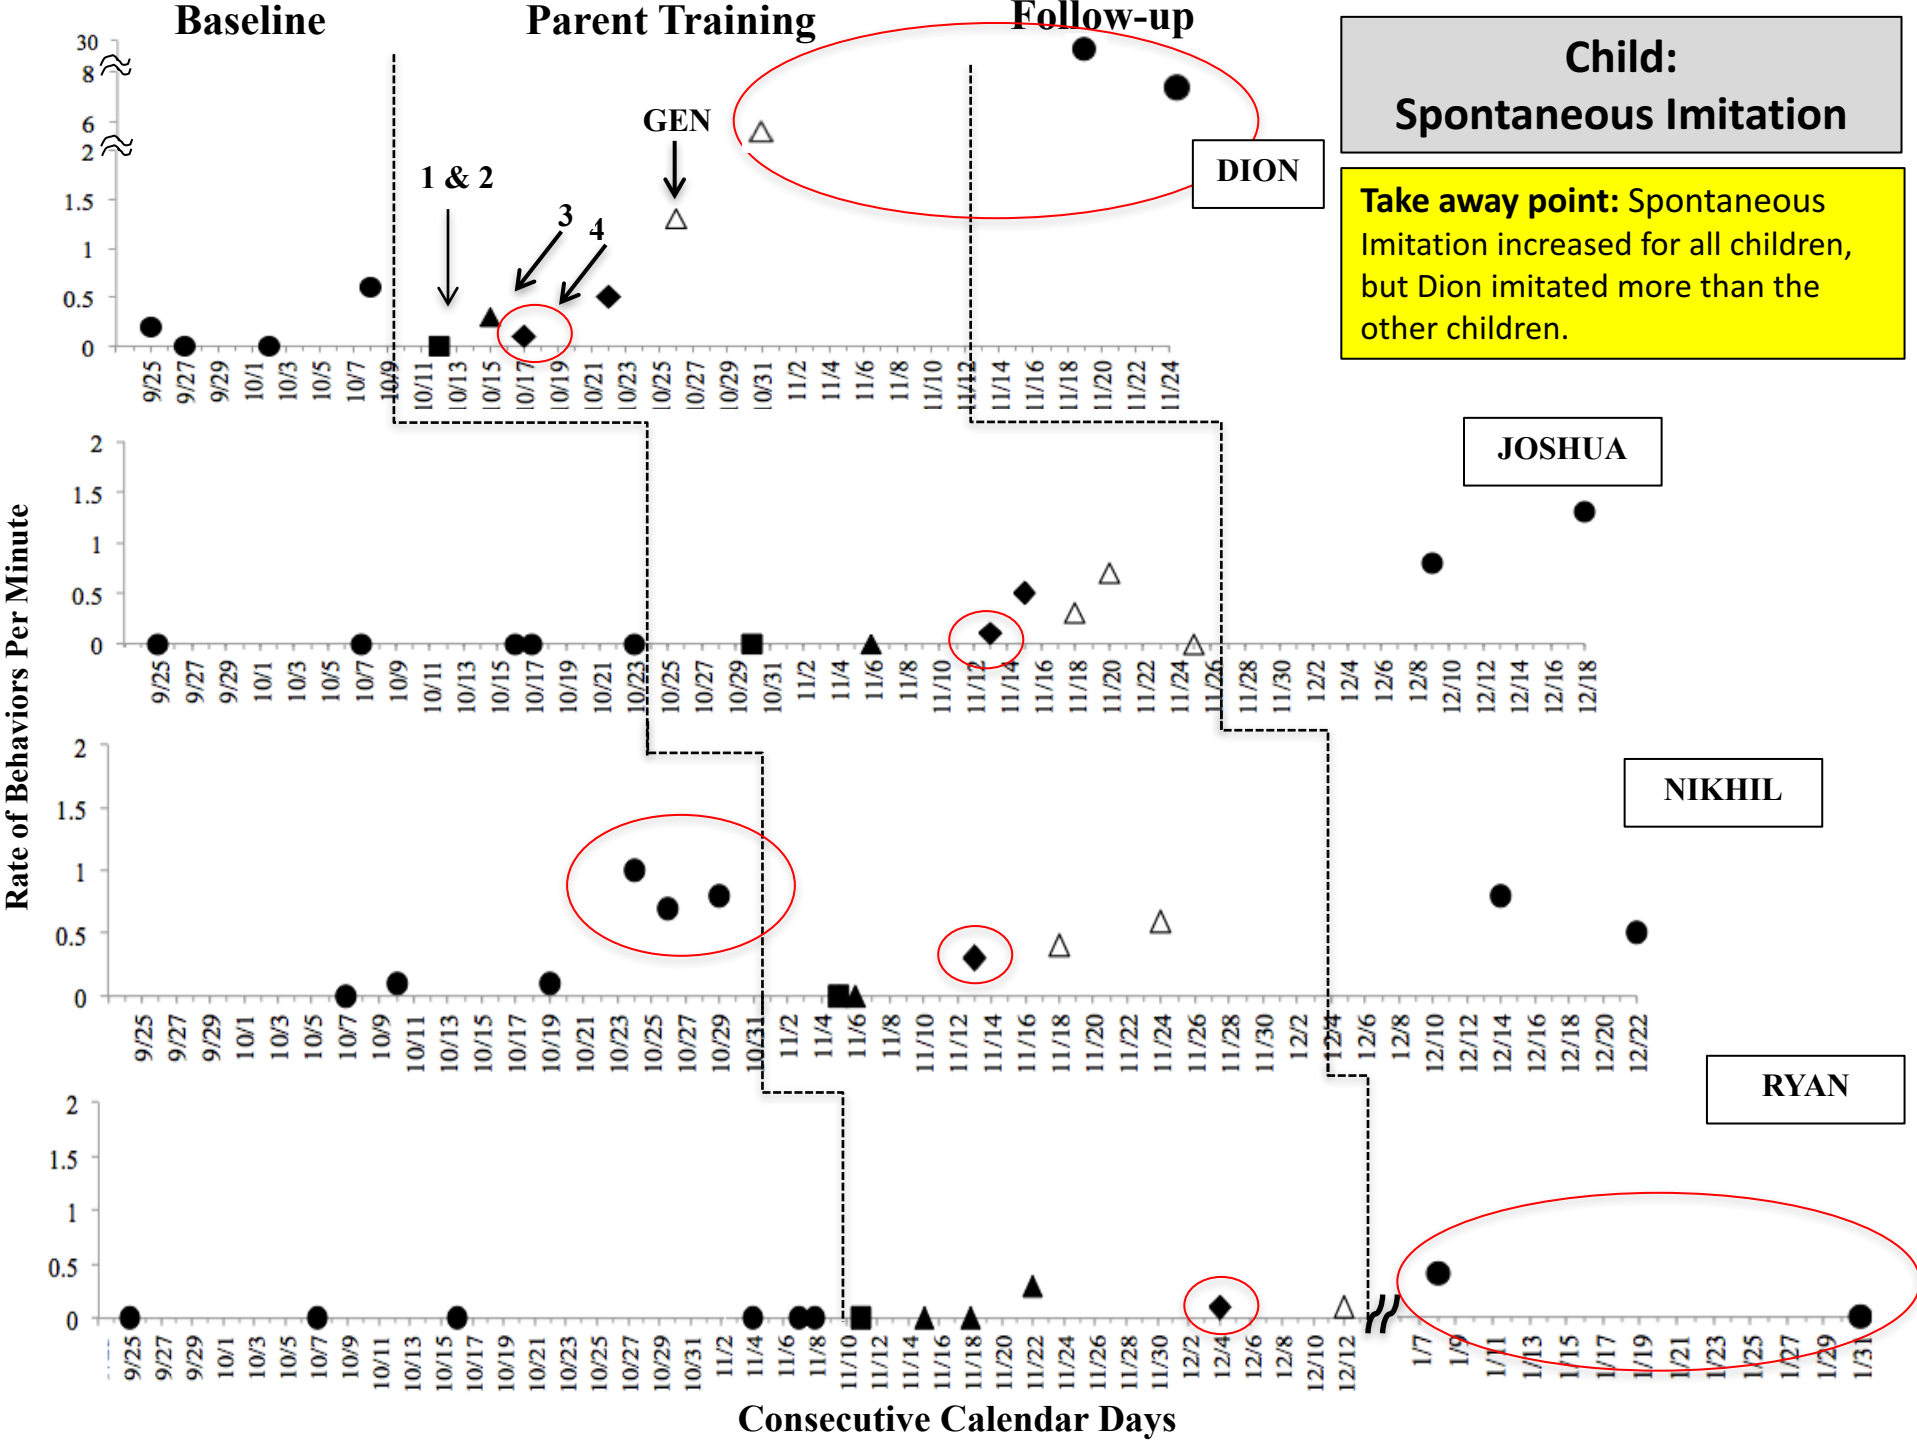

Results: Duration/Adherence

- Total treatment sessions/weeks:
 - Treatment ranged from 5 to 7 sessions (3.4 – 4.9 weeks)
- Cancellations/Parent Data Collected on Homework:
 - Cancellations ranged from 0 – 9
 - 2 parents did not collect homework data, two parents collected 15 and 18 sessions of data.

Practical Application

- **Educators/Child care providers:**
 - How do you design programs for social-engagement in the individuals you support?
 - Are you providing instruction that promotes spontaneous, generalized responses in behavior?
 - How do you continue to engage parents to practice and use the skills they have learned?

Conclusions & Future Directions

- Using a combination of Internet-based modules and in vivo coaching is effective for teaching parents.
- More research needs to be conducted!
- Application within the field of early intervention.

THANK YOU!

Johanna Taylor, PhD, BCBA
